	EXECUTIVE SUMMARY	v
	TABLE OF CONTENTS	xvi
	LIST OF FIGURES	xxiii
	LIST OF TABLES	xxvii
	LIST OF TEXT BOXES	xxxiv
	SYMBOLS AND ABBREVIATIONS	xxxv
1	**INTRODUCTION**	1
1.1	Important concepts	1
1.1.1	Smallholder farming in South Africa	1
1.1.2	Subsistence farming	1
1.1.3	Irrigated smallholder schemes in South Africa	2
1.1.4	Management	3
1.1.4.1	General definition	3
1.1.4.2	Management of family farm enterprises	3
1.1.4.3	Management of smallholder canal irrigation schemes	6
1.1.5	Participatory research	7
1.1.6	Adaptive research	7
1.1.7	Implications for the current study	8
1.2	Historical development of smallholder farming in South Africa	9
1.2.1	General trends	9
1.2.2	Smallholder farming in Venda: variations on a theme	13
1.3	Smallholder irrigation scheme development in South Africa: History and current status	15
1.3.1	Historical development eras	15
1.3.1.1	The peasant and mission diversion scheme era	15
1.3.1.2	The smallholder canal scheme era	15
1.3.1.3	The homeland era	17
1.3.1.4	The irrigation management transfer (IMT) and revitalisation era	18
1.3.2	The status and future of smallholder irrigation schemes in South Africa	20
1.4	Objectives of the study	22
1.5	Selection of the study sites	24
1.5.1	Smallholder irrigation schemes in Limpopo Province: a brief overview	24
1.5.2	Site selection	25
1.5.3	Brief description of the study sites	26
1.5.3.1	Dzindi Irrigation Scheme	26
1.5.3.2	Khumbe Irrigation Scheme	27
1.5.3.3	Rabali Irrigation Scheme	27
1.6	Approach used in the conduct of the project	27
1.6.1	Theoretical background to the approach	27
1.6.2	Initiating the approach	29
1.6.2.1	Stakeholder analysis	29

1.6.2.2 Negotiating a framework for the development of a community of practice: Integrating the results of the stakeholder analysis 30
1.6.2.3 Initiating an action and evaluation framework 32
1.6.2.4 Analysis of the outcomes and reflection on the process 32
1.6.3 Subsequent developments 33
1.6.4 Project activities 35
References 35

2 THE STUDY SITES 40
2.1 Methods 40
2.2 Dzindi 40
2.2.1 Brief history of Dzindi 40
2.2.2 Physical factors 44
2.2.2.1 Climate 44
2.2.2.2 Geology 44
2.2.2.3 Topography 45
2.2.2.4 Vegetation 45
2.2.2.5 Soils 45
2.2.3 Infrastructural factors 49
2.2.3.1 Description of the irrigation infrastructure 49
2.2.3.2 Evaluation of the water distribution system 51
2.2.3.3 Communication services 52
2.2.3.4 Transport infrastructure and services 52
2.2.3.5 Financial services 52
2.2.3.6 Storage and processing facilities 53
2.2.3.7 Market infrastructure 53
2.2.3.8 Electricity 54
2.2.3.9 Social infrastructure 54
2.2.4 Organisational and institutional factors 54
2.2.5 Human, social and economic factors 55
2.3 Khumbe and Rabali 55
2.3.1 Brief history of Khumbe and Rabali 55
2.3.2 Physical factors 56
2.3.3 Infrastructural factors 57
2.3.4 Organisational and institutional factors 60
2.4 Conclusions 61
References 62

3 COMMODITY SYSTEMS 64
3.1 Land use at Dzindi, Khumbe and Rabali 64
3.2 Important commodity systems at Dzindi 67
3.2.1 Theoretical framework 67
3.2.2 Research methods 68
3.2.3 The maize commodity chain at Dzindi 69
3.2.3.1 Description 69
3.2.3.2 Conclusions 76
3.2.4 Leafy vegetable commodity chains at Dzindi 78
3.2.4.1 Description 78
3.2.4.2 Conclusion 83
References 84

4	**LIVELIHOOD AND FARMING ON SMALLHOLDER IRRIGATION SCHEMES**	86
4.1	The livelihood concept	86
4.2	Livelihood strategies	88
4.3	Rural livelihoods in South Africa	90
4.4	Livelihood of plot holder households at Dzindi	92
4.4.1	The household concept	92
4.4.2	Data collection methods	94
4.4.3	Data analysis	96
4.4.4	Results	97
4.4.4.1	Origin of plot holder livelihood at Dzindi	97
4.4.4.2	Diversity of plot holder livelihood at Dzindi	99
4.5	The farming styles concept	109
4.6	Farming styles at Dzindi	110
4.6.1	Data collection and analysis	110
4.6.2	Results	112
4.7	Relationships between livelihood type and farming style at Dzindi	122
4.8	Dynamics in livelihood and farming at Dzindi	125
4.8.1	Livelihood dynamics	125
4.8.1.1	Pensioner households	125
4.8.1.2	Wage-earner households	126
4.8.1.3	Farmer households	127
4.8.1.4	Households active in the informal sector	128
4.8.1.5	Diversified-income households	129
4.8.2	Farming style dynamics	129
4.8.2.1	Food farmers	129
4.8.2.2	Employers	130
4.8.2.3	Profit-makers	131
4.8.2.4	Others	131
4.9	Livelihood and farming of plot holders at Khumbe and Rabali	132
4.9.1	Methods	132
4.9.2	Livelihood of plot holders at Khumbe and Rabali	133
4.9.3	Farming at Khumbe and Rabali	134
4.9.3.1	Khumbe	134
4.9.3.2	Rabali	134
4.10	Synthesis of the findings on livelihood and farming on smallholder irrigation schemes	135
4.10.1	Livelihood activities	135
4.10.2	Livelihood capabilities	136
4.10.3	Livelihood stores	136
4.10.4	The role of farming in the livelihood of plot holder households	137
4.10.5	The irrigated plot as a livelihood asset	137
4.10.6	Degree of poverty	138
4.10.7	Livelihood outlook of plot holders	139
	References	140
5	**SOCIAL AND INSTITUTIONAL DIMENSIONS OF SMALL-HOLDER IRRIGATION**	148
5.1	Important concepts	148

5.2 Sharing of water at Dzindi 149
5.2.1 Introduction 149
5.2.2 Methods 149
5.2.3 Content of the institutional and organisational system used to manage water at Dzindi 150
5.2.4 Practical application of the institutional and organisational system 151
5.2.5 The social dynamics of water sharing at Dzindi 152
5.2.6 Conclusions 156
5.3 Maintenance of irrigation infrastructure 156
5.3.1 Introduction 156
5.3.2 Methods 157
5.3.3 History of infrastructural maintenance at Dzindi 158
5.3.4 Social dynamics of routine infrastructural maintenance at Dzindi 161
5.3.5 Conclusions 163
5.4 Access to input and output markets 164
5.4.1 Introduction 164
5.4.2 Methods 166
5.4.3 History of collective action in relation to markets at Dzindi 167
5.4.4 Social dynamics of collective action in relation to markets at Dzindi 170
5.4.5 Conclusions 172
5.5 Access to land on smallholder irrigation schemes 172
5.5.1 Access to land and land tenure 172
5.5.2 Trust tenure on smallholder irrigation schemes 173
5.5.3 Land exchanges on smallholder irrigation schemes 177
5.5.4 Discussion and conclusions 178
5.6 Land preparation on smallholder irrigation schemes 179
5.6.1 History of land preparation technology 179
5.6.2 Withdrawal of public land preparation services from smallholder irrigation schemes 180
5.6.3 Coping with the withdrawal of public land preparation services 181
5.6.3.1 Dzindi 181
5.6.3.2 Khumbe and Rabali 182
5.6.4 Discussion and conclusions 182
References 183

6 RELATIONSHIPS BETWEEN SMALLHOLDER IRRIGATION SCHEMES AND THEIR SURROUNDS 188
6.1 Introduction 188
6.2 Methods 188
6.3 Land and water in the surrounds of Dzindi 191
6.3.1 Land in the settlements surrounding Dzindi 191
6.3.2 Water in the settlements surrounding Dzindi 196
6.4 River extraction of water from the Dzindi River above the weir 199
6.5 Land and water at Dzindi 202
6.5.1 Land at Dzindi 202
6.5.2 Water at Dzindi 205
6.6 Social relationships between Dzindi and its surrounds 205
6.7 Discussion and conclusions 208

	References	209
7	**INTEGRATING CROP AND ANIMAL PRODUCTION SYSTEMS ON SMALLHOLDER IRRIGATION SCHEMES**	210
7.1	Introduction	210
7.2	Methods	217
7.2.1	Processing of full fat soya beans (FSSB)	217
7.2.2	Nutritive composition of the different broiler diets	218
7.2.3	Poultry housing	221
7.2.4	Experimental design	221
7.2.5	Allocation procedures	222
7.2.6	Measurements	224
7.2.7	Data analysis	224
7.3	Results	225
7.3.1	Feed intake	225
7.3.2	Growth performance	226
7.3.3	Yield testing	227
7.3.4	Poultry manure	227
7.3.5	Economic evaluation	228
7.4	Conclusions	231
	References	231
8	**IMPROVING PRODUCTION OF CHINESE CABBAGE AND NIGHTSHADE AT DZINDI**	233
8.1	Introduction	233
8.2	Yield response of Chinese cabbage and nightshade to nitrogen, phosphorus and potassium	233
8.2.1	Problem identification and study objectives	233
8.2.2	Materials and methods	236
8.2.3	Response of *Solanum retroflexum* to N, P and K availability	238
8.2.4	Response of *Brassica rapa* subsp. *chinensis* to N, P and K availability	241
8.2.5	Discussion	244
8.2.6	Conclusions	245
8.3	Effect of planting date on the yield of Chinese cabbage	245
8.3.1	Problem identification and study objectives	245
8.3.2	Materials and methods	248
8.3.3	Preliminary results	251
8.3.4	Preliminary conclusions	253
8.4	Effect of soil water availability on the yield of Chinese cabbage	253
8.4.1	Problem identification and study objectives	253
8.4.2	Materials and methods	254
8.4.3	Preliminary results	255
8.4.4	Preliminary conclusions	258
	References	259
9	**IMPROVING GREEN MAIZE PRODUCTION AT DZINDI**	263
9.1	Introduction	263
9.2	Methods	265
9.3	Results and discussion	266

9.3.1 Planting date x planting density x cultivar experiment 266
9.3.2 Cultivar x planting density experiment 278
9.3.3 On-farm cultivar experiment 283
9.4 Conclusions 286
References 286

10 IMPACT OF THE PROJECT: PLOT HOLDER PERSPECTIVES 289
10.1 Introduction 289
10.2 Materials and methods 292
10.3 Results and discussion 292
10.4 conclusions 300
References 301

11 CONCLUSIONS, RECOMMENDATIONS AND GUIDELINES FOR BEST MAMAGEMENT PRACTICES 302
11.1 Contextual issues 302
11.1.1 Best management practices for whom? 302
11.1.2 Domains for best management practice development 303
11.2 Best management practices for smallholder irrigation schemes in Limpopo Province: general recommendations 304
11.2.1 The domain of the individual plot holder 304
11.2.2 The domain of the irrigation scheme 305
11.2.3 The domain of the world outside the scheme 306
11.3 Selected best management practices for important commodity systems found on smallholder irrigation schemes in Limpopo Province 307
11.3.1 Improving green maize production 307
11.3.2 Improving the production of selected African leafy vegetables 307
11.3.3 Integrating crop and animal production systems 308
11.4 Best management practices in partcipatory research and development 308
References 309
