TABLE OF CONTENTS

EXECUTIVE SUMMARY i

1. Part A: Presence, antibiotic susceptibility patterns and chlorination resistance of faecal pollution from a dense settlement and the possible impact of polluted water on downstream water users. i
1.1 Background and motivation i
1.2. Objectives i
1.3. Summary of Results i
1.3.1 Exposed population i
1.3.2 Bacteriological analysis of water samples and biofilms ii
1.3.3 Virological analysis of water samples and associated biofilms ii
1.4. Conclusions ii
1.5 Recommendations and Future Research ii

2. Part B: Microbiological analysis of irrigation waters and food crops iii
2.1 Background and motivation iii
2.2 Objectives iv
2.3 Summary of Results v
2.3.1 Optimisation of methods for the recovery of viruses and bacteria from food and water sources v
2.3.2 Molecular detection of viruses v
2.3.3 Molecular characterisation of viruses vi
2.3.4 Analysis of irrigation water and minimally processed food samples vi
2.4 Conclusions vii
2.5. Future research viii

3. Collaboration viii

4. Technology transfer viii

LIST OF TABLES xix

LIST OF FIGURES xx

PART A:

PRESENCE, ANTIBIOTIC SUSCEPTIBILITY PATTERNS AND CHLORINATION RESISTANCE OF FAECAL POLLUTION FROM A DENSE SETTLEMENT AND THE POSSIBLE IMPACT OF POLLUTED WATER ON DOWNSTREAM WATER USERS. 1

1. Background to study site and environment 2
1.1 Historical perspective 2
1.2 The DWAF/DANCED test case project 3
1.3 Main findings of baseline community survey carried out during February 2000 3
1.4 Education campaigns and findings of the 'before' and 'after' survey 4
1.5 Results of campaigns 5

2. Literature review of general sanitation problems associated with dense settlements 7
2.1 Provision of basic services
2.1.1 Situation worldwide 7
2.1.2 Situation in South Africa 9
2.2 Public health problems related to poor sanitation 10
2.3 Environmental impacts and sanitation 14

3. Quantification of faecal pollution in the Plankenbrug River using *Escherichia coli* as indicator organism 18
3.1 Introduction 18
3.2 Materials and Methods 18
3.2.1 Collection of samples 18
3.2.2 Coliform and *E. coli* counts 19
3.2.3 Statistical analyses of meteorological data 19
3.3 Results 20
3.3.1 "Expected" pattern 26
3.3.2 Unexpected patterns indicating sewage intrusion from other sources 27
3.3.3 Model for assessment of change in pollution 29
3.4 Discussion 30

4. Identification of the potential pathogens isolated from the Plankenbrug River 32
4.1 Introduction 32
4.2 Materials and Methods 33
4.2.1 Bacteriological analysis 33
4.2.2 Virological analysis 34
4.3 Results 36
4.3.1 Bacteriological analysis 36
4.3.2 Virological analysis 38
4.4 Discussion 39

5. Preliminary tests on antibiotic resistance of organisms in the Plankenbrug river water 41

5.1 Introduction 41
5.2 Material and Methods 42
5.3 Results 42
5.4 Discussion 46

6. Preliminary tests on chlorination resistance of organisms in the Plankenbrug river water 47
6.1 Introduction 47
6.2 Materials and methods 47
6.2.1 Indicator organism 47
6.2.2 Chlorine resistance assay 47
6.3 Results 48
6.3.1 After 30 minutes contact with chlorine 48
6.3.2 After 90 minutes contact with chlorine 49
6.4 Discussion 49

7. General discussion and conclusions 51

PART B: MICROBIOLOGICAL ANALYSIS OF IRRIGATION WATERS AND FOOD CROPS 53

8. Literature review 54
8.1 General introduction 54
8.2 Hepatitis A virus 54
8.2.1 Biochemical and biophysical characteristics 55
8.2.2 Clinical manifestations 56
8.2.3 Epidemiology 56
8.2.4 Prevention 57
8.3 Astroviruses 58
8.3.1 Biochemical and biophysical characteristics 58
8.3.2 Clinical manifestations 59
8.3.3 Epidemiology 59
8.3.4 Prevention 59
8.4 The role of food and water in the transmission of HAV, HuCV and HAstV infection 60
8.4.1 Introduction 60
8.4.2 Viral recovery and detection from food and water sources 63
8.5 Significance of food- and waterborne viral infections 64

9. Development and assessment of virological techniques for the recovery and detection of viruses from minimally processed foods 65
9.1 Materials and methods 65
9.1.1 Recovery of viruses from minimally processed foods 65
9.1.2 Recovery of viruses from irrigation water 66
9.1.3 Molecular detection of viruses 66
9.2 Results and Discussion 67
9.2.1 Recovery of viruses from minimally processed foods 67
9.2.2 Comparison of viral recovery buffer and viral RNA extraction methods from minimally processed foods 67

10. Microbiological analysis of irrigation water and associated minimally processed foods 70
10.1 Materials and methods 70
10.1.1 Water and food samples 70
10.1.2 Bacteriological analysis of water and food samples 70
10.1.3 Recovery of viruses from water and food samples 72
10.1.4 Molecular detection of viruses 72
10.2 Results and Discussion 73
10.2.1 Commercially available minimally processed foods 73
10.2.2 Irrigation water and associated minimally processed foods from rural areas 73

11. GENERAL DISCUSSION AND CONCLUSIONS 74
