Figures ..... *ii*
Tables ..... *ii*
Appendices ..... *ii*
Executive Summary ..... *iii*
Acknowledgements ..... *v*

1. INTRODUCTION 1
1.1 Context 1
1.2 Aims of the project 1
1.3 Approach 1
1.4 Case Study 2
1.5 The context of the resource directed measures 3
1.6 Implementation of the RQOs 7

2. WHAT ARE RESOURCE QUALITY OBJECTIVES? 9
2.1 Legal definition of RQOs 9
2.2 RQOs and groundwater 10
2.3 RQOs and sustainability indicators 10

3. SETTING GROUNDWATER RQOS 15
3.1 Principles for the Approach 15
3.2 Overview of setting RQOs 15
3.3 Step 1: Broadly characterise the groundwater resource 16
3.3.1 Reference conditions. 16
3.3.2 Groundwater reference parameters 17
3.3.3 Present Status 20
3.3.4 Degree of modification of groundwater 21
3.3.5 Uses of groundwater 22
3.4 Step 2: Define the aquifer attributes which support or limit the identified uses. 23
3.5 Step 3: Define the risk to uses with respect to hazards present in the catchment and aquifer vulnerability 26
3.6 Step 4: Select key measurable indicators which relate to the resource itself or land-use impacts 28
3.7 Step 5: Quantify the reference conditions, present status, sustainability threshold and variability of these resource indicators 30
3.8 Step 6: Outline the management actions that may be necessary to assure different levels modification are maintained 34
3.9 Step 7: The Minister, in consultation with the CMA, sets a value for the resource indicator: the RQO. 35

4. RECOMMENDATIONS FOR IMPLEMENTING RQOS 36

5. GLOSSARY AND ABBREVIATIONS 41
5.1 Abbreviations 41
5.2 Glossary 42
