TABLE OF CONTENTS

1 EXECUTIVE SUMMARY ii
1.1 BACKGROUND AND MOTIVATION ii
1.2 OBJECTIVES iii
1.3 RESULTS AND CONCLUSIONS iv
1.3.1 Suitability of system for use in urban areas iv
1.3.2 Suitability of system for use in rural (remote) areas iv
1.3.3 Economic considerations iv
1.3.4 Promotion and training needs v
1.4 CONTRIBUTION VALUE OF THE PROJECT vi
1.5 RECOMMENDATIONS FOR FURTHER RESEARCH AND TECHNOLOGY TRANSFER vi

ACKNOWLEDGEMENTS viii

1. INTRODUCTION 1
1.1 Objectives 2
1.2 Description of pit latrine and septic tank sludge disposal practices 3
1.3 Previous co-composting of sludge research and practice in South Africa 4
1.4 Recent developments in co-composting internationally 5
1.5 Motivation for this project 5

2 HEALTH CONCERNS IN THE HANDLING AND USE OF SLUDGE 6
2.1 Pathogens and toxins in sludge 6
Handling of sludge and refuse 7
2.3 Use of sludge for agricultural purposes 7

3 COMPOSTING OPTIONS 8
3.1 Introduction 8
3.2 Forced aeration composting 9
3.3 Manual or machine turned composting 10
3.4 Anaerobic composting 10

4 FORCED AERATION COMPOSTING TESTS 10
4.1 Construction of the windrows 10
4.2 Daspoort tests 11
4.3 Isando tests 12
4.3.1 Isando plant results 13
4.4 Hartebeesfontein tests 15
4.4.1 windrow 1 (pit latrine sludge): 15
4.4.2 windrow 2 (Olifantsfontein sewage treatment works filter press sludge): 18
4.4.3 windrow 3 (Ollfantsfontein sludge with garden refuse, with passive aeration system) 18

5. ANALYSIS OF RESULTS 20
5.1 Bulking materials 20
5.2 Nature and composition of sludge 21
5.3 Construction of the windrow 21
5.4 Aeration systems 21

5.5 Insulation layer 22
5.6 Composition of the final compost 22

6 CONCLUSIONS AND RECOMMENDATIONS 23
6.1 Suitability of system for use in urban areas 23
6.2 Suitability of system for use in rural (remote) areas 23
6.3 Economic considerations 23
6.4 Promotion and training needs 24

7 REFERENCES 25

ANNEXURE A: Brief guidelines on the development of a co-composting programme for developing communities

TABLE OF FIGURES
