

## TABLE OF CONTENTS

<b>Executive summary</b> .....	(i)
<b>Acknowledgements</b> .....	(iv)
<b>Table of contents</b> .....	(v)
<b>Chapter 1: Introduction</b> .....	1-1
1.1 Structure of this literature review .....	1-1
1.2 Sanitation: the South African experience .....	1-2
1.3 The need for alternative sanitation technologies .....	1-3
1.4 Urine-diversion technology as an alternative to pit toilets .....	1-4
1.5 The environment and public health: the argument for ecological sanitation .....	1-7
1.6 Conclusions .....	1-13
<b>Chapter 2: Urine-diversion applications: examples of current practice</b> ..	2-1
2.1 Introduction .....	2-1
2.2 Examples from other countries .....	2-1
2.2.1 Yemen .....	2-1
2.2.2 Vietnam .....	2-2
2.2.3 El Salvador .....	2-3
2.2.4 Ecuador .....	2-3
2.2.5 Mexico .....	2-5
2.2.6 Sweden .....	2-5
2.2.7 Bolivia .....	2-7
2.2.8 China .....	2-8
2.2.9 Zimbabwe .....	2-8
2.3 Examples from South Africa .....	2-9
2.3.1 Eastern Cape .....	2-9
2.3.2 Northern Cape .....	2-11
2.3.3 eThekweni, KwaZulu-Natal .....	2-15
2.3.4 North West .....	2-15
2.3.5 Johannesburg, Gauteng .....	2-17
2.4 Conclusions .....	2-17
<b>Chapter 3: Design and management aspects of ecosan toilets</b> .....	3-1
3.1 Introduction .....	3-1
3.2 Urine management .....	3-1
3.2.1 Urine diversion .....	3-2
3.2.2 Urine separation .....	3-2
3.2.3 Combined processing .....	3-2
3.2.4 Disposal of collected urine .....	3-3
3.2.5 Urine pipes and tanks .....	3-3
3.3 Faeces management .....	3-4
3.3.1 Dehydration versus composting .....	3-4
3.3.2 Solar heaters .....	3-4
3.3.3 Single or double vault .....	3-5
3.3.4 Disposal of anal cleansing material .....	3-6
3.3.5 Absorbents and bulking agents .....	3-7
3.3.6 Ventilation and fly control .....	3-7
3.3.7 Disposal of vault contents .....	3-7
3.3.8 Sustainability aspects .....	3-8
3.3.9 Possible future scenarios .....	3-9

3.4	Dimensions, methods and materials .....	3-10
3.5	Conclusions .....	3-12
<b>Chapter 4:</b>	<b>People, perceptions and practices .....</b>	<b>4-1</b>
4.1	Introduction .....	4-1
4.2	A global overview of urine-diversion projects .....	4-2
4.2.1	Planning .....	4-2
4.2.2	Marketing principles / promotion methods .....	4-4
4.2.3	Design .....	4-7
4.2.4	Health and hygiene awareness and education .....	4-9
4.2.5	Operation and maintenance .....	4-10
4.2.6	Re-use of human excreta .....	4-12
4.2.7	Monitoring and evaluation .....	4-13
4.3	Gender perspectives .....	4-15
4.4	Conclusions .....	4-16
<b>Chapter 5:</b>	<b>Agricultural utilisation of human excreta from ecosan toilets.....</b>	<b>5-1</b>
5.1	Introduction .....	5-1
5.2	Human excreta as fertilisers .....	5-2
5.3	Some practical examples of agricultural utilisation of human excreta .....	5-6
5.3.1	Japan .....	5-6
5.3.2	China .....	5-6
5.3.3	India .....	5-6
5.3.4	Guatemala .....	5-6
5.3.5	Zimbabwe .....	5-7
5.3.6	Ethiopia .....	5-8
5.3.7	Sweden .....	5-8
5.4	Small-scale crop experimentation in Zimbabwe .....	5-9
5.5	Nitrogen losses in urine .....	5-12
5.6	Conclusions .....	5-13
<b>Chapter 6:</b>	<b>Health and safety aspects of ecosan toilets and excreta re-use .....</b>	<b>6-1</b>
6.1	Introduction .....	6-1
6.2	Health aspects of excreta re-use .....	6-2
6.3	Pathogenic organisms in sanitation systems .....	6-3
6.3.1	Introduction .....	6-3
6.3.2	Urinary pathogens .....	6-4
6.3.3	Faecal pathogens .....	6-6
6.4	Transmission routes of pathogens .....	6-8
6.5	Survival of microorganisms in the environment .....	6-10
6.5.1	Introduction .....	6-10
6.5.2	Physiochemical and biological factors that affect the survival of pathogens in excreta and re-use systems ...	6-12
6.5.3	Contamination of soils and crops .....	6-14
6.5.4	Comparison of treatment efficiencies: dry sanitation technologies vs. conventional wastewater treatment systems .....	6-15
6.6	Existing guidelines for re-use of excreta .....	6-16
6.6.1	Introduction .....	6-16
6.6.2	Wastewater and sludge re-use .....	6-17

6.6.3	Dehydrated faeces re-use .....	6-18
6.7	Conclusions .....	6-18
<b>Chapter 7:</b>	<b>Conclusions .....</b>	<b>7-1</b>
7.1	General conclusions from the literature review .....	7-1
7.2	Ecosan problems and challenges .....	7-3
<b>Bibliography</b> .....		<b>B-1</b>

### List of tables

Table 5.1:	Estimated Swedish averages for mass and distribution of plant nutrient content in urine and faeces, expressed as percentages of total mass excreted .....	5-2
Table 5.2:	Proposed new Swedish default values for urine and faeces .....	5-2
Table 5.3:	Annual excretion of fertiliser by humans, compared with the fertiliser requirement of cereal .....	5-3
Table 5.4:	Annual excretion of fertiliser by humans .....	5-4
Table 5.5:	Amounts of heavy metals, in mg per person per year, found in various recyclable nutrients .....	5-5
Table 5.6:	Analysis of humus (faeces, soil and wood ash) from urine-diverting toilets .....	5-9
Table 5.7:	Plant trials for various vegetables, tomatoes and maize .....	5-9
Table 6.1:	Reduction efficiency in dry ecosan toilets, with a storage time of 6 months and pH value of 9 or more .....	6-16

### List of figures

Figure 1.1:	Schematic representation of a urine-diversion ("dry-box") toilet .....	1-6
Figure 1.2:	The linear, or open flow, system .....	1-10
Figure 1.3:	The cycle, or closed loop, system .....	1-10
Figure 1.4:	The concept of ecological sanitation .....	1-11
Figure 1.5:	Complete household ecosan .....	1-12
Figure 2.1:	Section through a house in the old part of Sanaa, Yemen.....	2-2
Figure 2.2:	The Vietnamese double-vault dehydrating toilet .....	2-3
Figure 2.3:	(a) Dehydrating toilet with urine diversion and solar-heated vault in El Salvador .....	2-4
	(b) Removing the desiccated faeces for use as soil conditioner .....	2-4
Figure 2.4:	A solar-heated dehydrating toilet in Ecuador .....	2-4
Figure 2.5:	The Mexican version of the Vietnamese double-vault toilet, installed in the bathrooms of modern houses in the city of Cuernavaca .....	2-5
Figure 2.6:	Mexican urine-diversion pedestal cast in mortar:	
	(a) The pedestal, which can be fitted with a conventional seat and lid .....	2-6
	(b) The pedestal shown alongside its fibreglass mould .....	2-6
Figure 2.7:	Swedish urine-diversion pedestals for:	
	(a) Dry system .....	2-6
	(b) Flushing system .....	2-6
Figure 2.8:	Porcelain urine-diversion toilet made in 1880 in Sweden .....	2-7
Figure 2.9:	Urine-diversion toilet in El Alto, Bolivia .....	2-7

Figure 2.10: Urine diversion ecosan toilets in Nanning area, China:	
(a) Toilet in a house .....	2-8
(b) School toilet .....	2-8
Figure 2.11: Urine-diversion toilets in Zimbabwe:	
(a) A simple but well-built toilet with wooden superstructure .....	2-9
(b) Women from the community engaged in casting floor slabs .....	2-9
Figure 2.12: The Eastern Cape pilot urine-diversion project near Umtata:	
(a) Toilet structure .....	2-10
(b) Rotationally-moulded plastic pedestal .....	2-10
Figure 2.13: Double chamber urine-diversion toilet added onto house in Campbell, Northern Cape:	
(a) Exterior view .....	2-11
(b) Interior view .....	2-11
Figure 2.14: Double chamber urine-diversion toilets in Spoegrivier, Northern Cape:	
(a) Toilet added onto house .....	2-12
(b) Separate toilet structure .....	2-12
Figure 2.15: Commercial toilet unit made from prefabricated panels, Goblershoop, Northern Cape:	
(a) The vault may be partially beneath the ground .....	2-12
(b) The faeces are collected in a net under the pedestal .....	2-12
Figure 2.16: Conversion of bucket toilets in Campbell, Northern Cape .....	2-13
Figure 2.17: Urine-diversion toilets in Merriman, Northern Cape:	
(a) This toilet has been installed inside the bathroom	
(b) The vault is outside the bathroom wall .....	2-13
Figure 2.18: (a) Free-standing brick toilet structure in Alheit .....	2-14
(b) Toilet built into house, Britstown, Northern Cape .....	2-14
Figure 2.19: Toilets in Hanover, Northern Cape, are constructed with alternating drop-holes for the pedestal, but with a single vault .....	2-14
Figure 2.20: Typical double vault urine-diversion toilet provided in eThekweni ....	2-15
Figure 2.21: This urine-diversion toilet in Kokomeg, in the Taung Area, is well maintained. The structure has a concrete vault lid and a proper window .....	2-16
Figure 2.22: Urine-diversion toilets in Matsheng, in the Taung area:	
(a) Badly-fitted corrugated iron lid on the vault .....	2-16
(b) Blocked urine pipe .....	2-16
Figure 2.23: Retrofitted urine-diversion toilet in Richard Holden's house in Bellevue, Johannesburg .....	2-17
Figure 3.1: Three options for dealing with liquids in ecological sanitation systems .....	3-2
Figure 3.2: Alternative ways of handling/using urine diverted from toilets .....	3-3
Figure 3.3: The "pusher" used to move the faecal pile, El Salvador .....	3-5
Figure 3.4: Examples of simple, easily made urinals:	
(a) Using a 5 litre container .....	3-11
(b) Using a clay or ferrocement pot .....	3-11
Figure 3.5: "Kiddie-seat" adaptations for urine-diversion pedestals:	
(a) Swedish version (wood) .....	3-11
(b) South African version (plastic) .....	3-11
Figure 5.1: Arborloo in a paw-paw plantation or "sanitary orchard" .....	5-7
Figure 5.2: Gunder Edström of SUDEA demonstrating this FAITH garden in Addis Ababa, Ethiopia .....	5-8
Figure 5.3: Two basins planted with rape and spinach .....	5-10
Figure 5.4: Urine has a pronounced effect on maize .....	5-10

Figure 5.5: Total cob yield from maize planted in three 10-litre basins .....	5-11
Figure 5.6: A single photograph shows the effect of different amounts of urine applied to maize plants over a 3-month period .....	5-11
Figure 6.1: Transmission routes for pathogens found in excreta .....	6-9
Figure 6.2: Survival times of pathogens in untreated faecal sludges applied to fields in warm climates .....	6-15
