EXECUTIVE SUMMARY	i-ii
ACKNOWLEDGEMENTS	iii-iv
LIST OF TABLES.....	xi-xii
LIST OF FIGURES.....	xiii-xiv
LIST OF APPENDICES.....	xv-xvi
LIST OF ACRONYMS.....	xvii-xx
LIST OF CONTRIBUTORS	xxi-xxii
1. INTRODUCTION.....	1
2. ENVIRONMENTAL FLOW ASSESSMENTS: BACKGROUND AND ASSUMPTIONS	3
2.1 The need for environmental flow assessments	3
2.2 Underlying assumptions	4
2.3 Conclusions	11
3. AN OVERVIEW OF ENVIRONMENTAL FLOW METHODOLOGIES, WITH PARTICULAR REFERENCE TO SOUTH AFRICA.....	15
3.1 Introduction	16
3.2 Methodologies based on hydrological data	17
3.3 Hydraulic rating methodologies	19
3.4 Habitat simulation methodologies	20
3.5 Holistic methodologies	25
3.6 Methodologies for assessment of flushing flow requirements	31
3.7 Methodologies for assessment of environmental flow requirements of riparian vegetation	32
3.8 Methodologies for assessment of environmental flow requirements of riparian and instream wildlife.....	33
3.9 Methodologies for assessment of environmental flow requirements for water quality purposes	34
3.10 Methodologies in use or recommended for future application in various countries.....	35
3.11 The present status of environmental flow methodologies in South Africa.....	35
4. ENVIRONMENTAL FLOW ASSESSMENTS WITHIN THE SOUTH AFRICAN INTEGRATED PLANNING PROCESS FOR WATER RESOURCES	41
4.1 The new South African Water Law	41
4.2 The ecological Reserve within the context of the water resources planning process.....	42
4.3 Why is an ecological Reserve necessary?	43
4.4 Steps for setting the ecological Reserve	44

4.5	The Ecological Management Class	46
4.6	Different levels of ecological Reserve determination	47
5.	OVERVIEW OF THE BUILDING BLOCK METHODOLOGY	53
5.1	Origin of the Building Block Methodology	53
5.2	Assumptions and character of the Building Block Methodology.....	54
5.3	Sequence of activities in the Building Block Methodology	54
6.	INITIATION OF THE BUILDING BLOCK METHODOLOGY STUDY	65
6.1	Introduction	65
6.2	Initiation of the study.....	65
6.3	Preliminary delineation of the study area	66
6.4	Preliminary selection of river sections	66
6.5	Habitat integrity assessment	68
6.6	The Planning Meeting	68
7.	SELECTION OF STUDY SITES.....	71
7.1	The importance of study sites in the Building Block Methodology	71
7.2	Minimum and ideal data sets	72
7.3	Sequence of activities	73
7.4	The site selection report for the workshop	76
8.	OVERVIEW OF THE RIVER AND ASSESSMENT OF HABITAT INTEGRITY	79
8.1	Assessment of habitat integrity in river management.....	79
8.2	Assessment of habitat integrity in the Building Block Methodology	80
8.3	Sequence of activities	80
8.4	Minimum and ideal data sets	85
8.5	Starter documentation for the workshop	89
8.6	Roles and responsibilities at the workshop.....	89
8.7	Roles and responsibilities after the workshop	89
8.8	Example of Terms of Reference	90
8.9	Minimum and optimum specialist training.....	90
8.10	Potential pitfalls.....	92
8.11	Further developments	92
8.12	Monitoring.....	93
8.13	Conclusions	93
9.	SOCIAL USE OF RIVERINE RESOURCES	95
9.1	Resource use in river management.....	96
9.2	Resource use in the Building Block Methodology	96
9.3	Overview of approach	97
9.4	Sequence of activities	99
9.5	Minimum and ideal data sets	109
9.6	Starter documentation for the workshop	109
9.7	Roles and responsibilities at the workshop.....	109
9.8	Roles and responsibilities after the workshop	110
9.9	Example of Terms of Reference	110
9.10	Minimum and optimum specialist training.....	111
9.11	Potential pitfalls.....	111
9.12	Further developments	112

9.13	Monitoring.....	113
9.14	Conclusions	115
10.	ASSESSMENT OF ECOLOGICAL IMPORTANCE AND SENSITIVITY.....	117
10.1	Defining ecological importance and sensitivity	117
10.2	Ecological importance and sensitivity in the Building Block Methodology	118
10.3	Assessing ecological importance and sensitivity.....	118
10.4	Minimum and ideal data sets	119
10.5	Starter documentation for the workshop	120
10.6	Example of Terms of Reference.....	120
10.7	Minimum and optimum specialist training.....	120
10.8	Potential pitfalls.....	124
11.	ECOLOGICAL MANAGEMENT CLASSES	125
11.1	Overview of the Ecological Management Class.....	125
11.2	Setting the Ecological Management Class	128
11.3	Potential pitfalls.....	131
11.4	Further developments	132
11.5	Conclusions	132
12.	HYDROLOGY	133
12.1	The hydrological regime in river structure and functioning	133
12.2	Hydrology in the Building Block Methodology	135
12.3	Minimum and ideal data sets	136
12.4	Sequence of activities	138
12.5	Starter documentation for the workshop	147
12.6	Roles and responsibilities at the workshop.....	147
12.7	Roles and responsibilities after the workshop	148
12.8	Example of Terms of Reference.....	149
12.9	Minimum and optimum specialist training.....	150
12.10	Potential pitfalls.....	150
12.11	Further developments	151
12.12	Monitoring.....	151
12.13	Conclusions	152
13.	HYDRAULICS.....	153
13.1	Local hydraulics in the ecological functioning of a river	153
13.2	Hydraulic studies in the Building Block Methodology	154
13.3	Sequence of activities	155
13.4	Minimum and ideal data sets	161
13.5	Starter documentation for the workshop	162
13.6	Roles and responsibilities at the workshop.....	162
13.7	Roles and responsibilities after the workshop	165
13.8	Example of Terms of Reference.....	165
13.9	Minimum and optimum specialist training.....	165
13.10	Potential pitfalls.....	166
13.11	Further developments	166
13.12	Monitoring.....	167
13.13	Conclusions	167

14.	GEOMORPHOLOGY	169
14.1	Geomorphology in the structure, functioning and management of riverine ecosystems	169
14.2	Geomorphological studies in the Building Block Methodology	175
14.3	Sequence of activities	175
14.4	Minimum and ideal data sets	186
14.5	Starter documentation for the workshop	189
14.6	Roles and responsibilities at the workshop.....	190
14.7	Roles and responsibilities after the workshop	192
14.8	Example of Terms of Reference	192
14.9	Minimum and optimum specialist training.....	192
14.10	Potential pitfalls.....	192
14.11	Further developments	193
14.12	Monitoring.....	193
14.13	Conclusions	193
15.	WATER QUALITY	195
15.1	Water quality in river functioning and management	195
15.2	Water quality considerations in the Building Block Methodology	196
15.3	Minimum and ideal data sets	197
15.4	Protocol for incorporating water quality in the Building Block Methodology.....	199
15.5	Further developments	203
15.6	Conclusions	206
16.	VEGETATION	207
16.1	Vegetation in river functioning and management	207
16.2	Vegetation studies in the Building Block Methodology.....	208
16.3	Sequence of activities	212
16.4	Minimum and ideal data sets	222
16.5	Starter documentation for the workshop	223
16.6	Roles and responsibilities at the workshop	224
16.7	Roles and responsibilities after the workshop	227
16.8	Example of Terms of Reference.....	228
16.9	Minimum and optimum specialist training.....	228
16.10	Potential pitfalls.....	228
16.11	Further developments	229
16.12	Monitoring.....	230
16.13	Conclusions	230
17.	AQUATIC INVERTEBRATES	231
17.1	Aquatic invertebrates in river structure, functioning and management.....	232
17.2	Aquatic invertebrate studies in the Building Block Methodology	233
17.3	Sequence of activities	234
17.4	Minimum and ideal data sets	235
17.5	Starter documentation for the workshop	236
17.6	Roles and responsibilities at the workshop.....	237
17.7	Roles and responsibilities after the workshop	238
17.8	Example of Terms of Reference	239
17.9	Minimum and optimum specialist training.....	241
17.10	Potential pitfalls.....	242
17.11	Further developments	242
17.12	Monitoring.....	243
17.13	Conclusions	244

18.	FISH	245
18.1	Fish in river structure, functioning and management	245
18.2	Fish studies in the Building Block Methodology	246
18.3	Sequence of activities	248
18.4	Minimum and ideal data sets	252
18.5	Starter documentation for the workshop	253
18.6	Roles and responsibilities at the workshop.....	254
18.7	Roles and responsibilities after the workshop	254
18.8	Example of Terms of Reference.....	254
18.9	Minimum and optimum specialist training	255
18.10	Potential pitfalls.....	255
18.11	Further developments	256
18.12	Monitoring.....	256
18.13	Conclusions	256
19.	GROUNDWATER.....	259
19.1	Groundwater and the functioning of rivers.....	259
19.2	Groundwater studies in the Building Block Methodology	260
19.3	Sequence of activities	261
19.4	Minimum and ideal data sets	263
19.5	Starter documentation for the workshop	264
19.6	Roles and responsibilities at the workshop.....	265
19.7	Roles and responsibilities after the workshop	266
19.8	Example of Terms of Reference.....	266
19.9	Minimum and optimum specialist training.....	266
19.10	Potential pitfalls.....	267
19.11	Further developments	267
19.12	Monitoring.....	268
19.13	Conclusions	268
20.	COORDINATION OF THE BUILDING BLOCK METHODOLOGY STUDY AND PRODUCTION OF THE WORKSHOP STARTER DOCUMENT	271
20.1	Coordination of the Building Block Methodology study	271
20.2	The workshop starter document	272
20.3	The site visit document.....	274
21.	THE BUILDING BLOCK METHODOLOGY WORKSHOP AND REPORT	275
21.1	Introduction	275
21.2	Participants and venue.....	275
21.3	Workshop programme	276
21.4	Role of the facilitator during the workshop.....	287
21.5	Role of the coordinator during the workshop.....	287
21.6	The workshop report.....	287
22.	POST-WORKSHOP SCENARIO ASSESSMENT AND IMPLEMENTATION OF THE ENVIRONMENTAL FLOW REQUIREMENT	289
22.1	Background.....	289
22.2	The nature of phase three of the Building Block Methodology	290
22.3	Scenario building and calculation of system yield	290
22.4	Dam design.....	296

Table of Contents

22.5	Dam operation	297
22.6	Conclusions	299

APPENDICES	301-320
