**Part 1 Introduction to Catchment-Scale Eutrophication Assessments**

1	Introduction	1
	1.1 Background to the study	1
	1.2 Aims of the project	1
	1.3 Description of the output products	2
	1.4 Target audience of this guide document	3
	1.5 Development philosophy of the Guide	3
	1.6 Layout of the Guide document	3
2	Introduction to eutrophication	4
	2.1 Introduction and problem statement	4
	2.2 Eutrophication status and trends in South Africa	7
	2.3 Causes of Eutrophication	8
	2.4 Impacts and consequences of Eutrophication	9
	2.5 Options to manage Eutrophication	10
3	Introduction to catchment eutrophication assessment	12
	3.1 Introduction to catchment management	12
	3.2 Introduction to catchment assessment studies	14
	3.3 Eutrophication assessment as a component of a catchment assessment study	14
	3.4 Eutrophication assessment as a discrete study	15
4	Introduction to Catchment-scale eutrophication assessment guide (Part 2 of this document)	16
	4.1 Introduction	16
	4.2 Primary management questions and assessment tasks	16
5	Nutrient Enrichment Assessment Protocol (NEAP)	21
	5.1 What is NEAP?	21
	5.2 The NEAP Development philosophy	21
	5.3 What is nutrient enrichment?	21
	5.4 Why focus on phosphorus?	22
	5.5 Where does phosphorus come from?	22
	5.5.1 Is nutrient enrichment the sole cause of eutrophication?	22
	5.5.2 Trophic state	22
	5.5.3 Lakes vs. reservoirs	23
	5.6 What is NEAPs level of resolution?	24
	5.7 Introduction to the model base of NEAP	24
	5.8 Features of NEAP	25
	5.9 User understanding of eutrophication	26
6	Introduction to the Eutrophication Assessment Training Material	27
	6.1 Introduction	27
	6.2 Target audience	27
	6.3 Guiding principles in developing the training material	27
	6.4 Outline of two eutrophication assessment short courses	27

6.4.1	Introduction	27
6.4.2	An introduction to eutrophication assessment	28
6.4.3	A catchment eutrophication assessment protocol	30
6.5	Inventory of Eutrophication Assessment training material	31
6.6	Concluding remarks on the building of eutrophication assessment capacity	32
7	Conclusions, recommendations and Capacity Building initiatives	33
7.1	Conclusions and recommendations: Catchment Eutrophication Assessment Guide	33
7.2	Conclusions and recommendations: NEAP (Nutrient Enrichment Assessment Protocol)	33
7.3	Conclusions and recommendations: Eutrophication assessment training course outline and material	34
7.4	Capacity building initiatives	34
7.4.1	Support for tertiary student training	34
7.4.2	Presentations at workshops and conferences	35
8	References for Part 1 of the Guide document	36

## **Part 2 A Guide to Conduct Catchment Scale Eutrophication Assessments for Rivers, Reservoirs and Lacustrine Wetlands**

<b>COMPONENT 0</b>		45
	Inception Summary of Existing Understanding, Knowledge and Past Studies with Regard to Eutrophication Related Water Quality in the Catchment	45
<b>COMPONENT 1</b>		48
	Details of Physical, Developmental and Administrative Attributes and Characteristics of the Catchment Relevant to the Assessment of the Eutrophication Status	48
<b>COMPONENT 2</b>		54
	Requirements of the National Water Resource Strategy and Resource Directed Measures with regard to Nutrient Management	54
<b>COMPONENT 3</b>		59
	Water Use and Conservation related to Eutrophication Assessment	59
<b>COMPONENT 4</b>		61
	Overview of Adequacy of Water Availability	61
<b>COMPONENT 5</b>		63
	Water Quality Requirements, and Constituents of Concern related to Eutrophication	63
<b>COMPONENT 6</b>		70
	Eutrophication Related Water Quality for Streamflow, Reservoirs and Wetlands	70
<b>COMPONENT 7</b>		80
	Point Source Waste Discharges and Source Characteristics related to Eutrophication	80
<b>COMPONENT 8</b>		86
	Non-Point Source Water Quality Loadings and Impacts related to Eutrophication	86
