

## TABLE OF CONTENTS

	Page
ACKNOWLEDGEMENTS	i
GLOSSARY OF TERMS	iii
<b>1. CHAPTER 1 INTRODUCTION</b>	
1.1 Sewage Sludge Treatment and Disposal	1
1.2 Dual Digestion	2
1.3 Research and Development Programme	4
<b>2. CHAPTER 2 LITERATURE REVIEW</b>	
2.1 Introduction	6
2.2 Sewage Sludge as a Feed Substrate	7
2.3 Aerobic Digestion	8
2.3.1 Microbiological aspects	8
2.3.2 Process aspects	9
2.4 Thermophilic Aerobic Digestion	10
2.5 Anaerobic Digestion	13
2.5.1 Advantages and disadvantages	13
2.5.2 Operational considerations and treatment capacity of mesophilic anaerobic sludge digesters	15
2.5.2.1 Digester load rate	15
2.5.2.2 Solids retention time	16
2.5.2.3 Solids reduction	17
2.5.2.4 Buffer capacity and pH	18
2.5.2.5 Volatile acids	18
2.6 Disinfection	19
2.6.1 Occurrence of pathogens in sewage	19
2.6.2 Criteria for disinfection	21
2.6.3 Standards or guidelines for sludge disinfection	23
2.6.3.1 Existing US regulations	23
2.6.3.2 Proposed new US regulations	25
2.6.3.3 Existing German Federal and State regulations	27
2.6.3.4 Recommendations for future changes to the OSS	27
2.6.3.5 South African Guidelines for the use of sewage sludge	29
2.7 Dual Digestion	31
2.7.1 Historical development	31
2.7.2 Initial bench and pilot scale evaluation	32
2.7.3 Full-scale demonstration of dual digestion	34
2.7.4 Evaluation of the process (USA)	35

2.7.5	European dual digestion plants	37
	2.7.5.1 Process description	37
	2.7.5.2 Plant performance	38
2.7.6	Concluding comments	39
<b>CHAPTER 3 PLANT DETAILS</b>		
3.1	Location of Plant	40
3.2	Dual Digestion Plant Equipment	40
	3.2.1 Sludge thickener	43
	3.2.2 Aerobic reactor	43
	3.2.3 Sludge oxygenation system	43
	3.2.4 Anaerobic digester	44
	3.2.5 Temperature monitoring and recording	45
3.3	Mode of operation	45
<b>CHAPTER 4 OPERATION OF PLANT</b>		
4.1	Commissioning and Operating History	47
4.2	Plant Operation and Monitoring	47
	4.2.1 Sludge thickening	47
	4.2.2 Aerobic reactor	48
	4.2.2.1 Sludge feeding and level control	48
	4.2.2.2 Oxygenation system	50
	4.2.2.3 Temperature monitoring	51
	4.2.2.4 Mixing in the reactor	52
	4.2.2.5 Gas measurement	55
	4.2.2.6 Sludge flow and analyses	56
	4.2.2.7 Aerobic reactor start up	56
	4.2.2.8 Foam production in the aerobic reactor	58
	4.2.2.9 Aerobic vent gas odour	59
	4.2.2.10 Aerobic reactor vessel	59
	4.2.3 Aerobic reactor - heat generation, temperature control and oxygen requirements	60
	4.2.3.1 Heat balance across the reactor	62
	4.2.3.2 Oxygen mass balance	64
	4.2.4 Anaerobic digester	65
	4.2.4.1 Digester structure	65
	4.2.4.2 Sludge feeding and discharge	66
	4.2.4.3 Mixing	66
	4.2.4.4 Heating and temperature monitoring	67
	4.2.4.5 Biogas monitoring	67
	4.2.4.6 Digester start up	68
	4.2.4.7 Final sludge dewatering	70
<b>CHAPTER 5 RESULTS AND DISCUSSION</b>		
5.1	Introduction	71
5.2	Aerobic Reactor	71
	5.2.1 Process reliability	71
	5.2.2 Reactor temperature	72

5.2.3	Retention time in the reactor ( $R_d$ )	73
5.2.4	Oxygen supplied and consumed	73
5.2.5	Power consumption	75
5.2.6	Specific heat yield ( $Y_H$ ) determinations	75
5.2.7	Temperature control - aerobic reactor	78
5.2.8	Steady state heat balance	79
5.2.9	Respiration quotient ( $Y_{CO_2}$ )	83
5.2.10	Volatile solids and COD removal	83
5.3	Anaerobic Digester	85
5.3.1	Operation and control	85
5.3.2	Digester temperature	86
5.3.3	Retention period in the digester	87
5.3.4	Gas production	88
5.3.5	Chemical/Physical analyses	89
5.4	Final Sludge Dewatering	93
5.4.1	Laboratory studies - sludge characterization	93
5.4.1.1	Sludge conditioning and characterization tests	93
5.4.1.2	Results and conclusions of characterization tests	94
5.5	Disinfection	95
5.6	Overall Performance of the Dual Digestion Process	98
<b>CHAPTER 6 CONCLUSIONS AND RECOMMENDATIONS</b>		
6.1	Compliance with Process Claims	101
6.2	Aerobic Reactor Conclusions	104
6.3	Anaerobic Digester Conclusions	105
6.4	Overall Dual Digestion Process Conclusions	106
<b>CHAPTER 7 REFERENCES</b>		<b>108</b>
