
TABLE OF CONTENTS

ACKNOWLEDGEMENTS.....	ii
EXECUTIVE SUMMARY.....	iii
TABLE OF CONTENTS.....	viii
LIST OF TABLES.....	xix
LIST OF FIGURES.....	xviii
INTRODUCTION.....	1
1.1 Background.....	1
1.2 Problem statement.....	7
1.3 Objectives of the study.....	8
1.4 Hypotheses.....	9
1.5 The study area.....	9
1.6 Research method.....	10
1.7 Data used.....	11
1.8 Chapter outline.....	12
CHAPTER 2 : LITERATURE REVIEW.....	14
2.1 Introduction.....	14
2.2 Overview of water use rights in South Africa.....	14
2.2.1 The old water law, Water Act (Act 54 of 1956).....	15
2.2.2 The new National Water Act (Act 36 of 1998).....	17
2.3 Water resource management.....	22
2.3.1 Water supply and demand management.....	22
2.3.2 Integrated water resource management.....	25
2.4 Water allocation systems.....	29
2.4.1 Centralised allocation systems.....	31

2.4.2	Market allocation systems	32
2.5	Water as an economic good.....	35
2.5.1	The cost of water	37
2.5.2	Value of water.....	38
2.5.2.1	Methodologies for estimating the value of water	38
2.5.2.2	Important aspects influencing the value of water	39
2.5.2.3	Generally accepted guidelines for the value of water in alternative uses.....	41
2.5.3	The opportunity cost of water.....	43
2.6	Characteristics of water demand and water markets	44
2.6.1	Urban water demand characteristics	44
2.6.2	Agricultural water demand characteristics	47
2.6.3	Required conditions for trade	50
2.6.3.1	Property rights	51
2.6.3.2	Public information on the exchange of water rights.....	54
2.6.3.3	Transaction costs and the physical and legal possibility for trade.....	54
2.6.4	Forms of water trade transactions.....	56
2.6.4.1	Permanent water sales/transfers.....	57
2.6.4.2	Lease contracts.....	57
2.6.4.3	Option contracts.....	59
2.6.5	Advantages of tradable property rights to water.....	61
2.6.5.1	Improved efficiency of water use	61
2.6.5.2	Tradable water rights lead to sound investment	64
2.6.5.3	Increased investment and growth	64
2.6.5.4	Flexibility.....	65
2.6.5.5	Ability to gather, process and use information.....	67
2.6.5.6	Water markets are fair	68
2.6.6	Imperfections of water markets	69
2.7	Establishing water markets and overcoming market imperfections	75
2.7.1	Implementation of water markets	76
2.7.2	Overcoming market imperfections	78
2.7.2.1	The role of the public sector	78
2.7.2.2	Initial allocation and definition of water rights	81
2.7.2.3	Learn from experience in other markets.....	82
2.8	The effect of intersectoral water transfers.....	82
2.8.1	Advantages of intersectoral water transfers.....	84
2.8.2	Concerns for agricultural to urban water transfers	85
2.8.3	A vision for the future of intersectoral water transfers.....	87
2.9	International experience with water markets	88
2.9.1	Experiences in the USA.....	88
2.9.2	Pakistan and India.....	91
2.9.3	Chile.....	92
2.9.4	Mexico	93
2.9.5	Australia.....	94
2.9.6	Peru	99
2.9.7	Spain	99
2.9.8	Experiences with water right transfer in South Africa	100

2.10	Overview of modelling approaches followed and results obtained	102
2.10.1	General remarks on the modelling of water markets.....	102
2.10.2	Approaches followed in previous studies	104
2.10.2.1	Studies using farm linear programming approaches	104
2.10.2.2	Studies using a regional or spatial equilibrium modelling approach.....	107
2.10.3	Specifications of spatial equilibrium models and the PMP methodology	110
2.10.3.1	The "standard" spatial equilibrium approach.....	111
2.10.3.2	The primal-dual formulation for spatial equilibrium models (SEM)	111
2.10.3.3	The Positive Mathematical Programming (PMP) approach.....	113
 CHAPTER 3 : DESCRIPTION OF THE STUDY AREA		117
3.1	Introduction.....	117
3.2	The Berg River and its tributaries	117
3.3	Natural features of the Berg River	118
3.3.1	Topography.....	118
3.3.2	Climate.....	120
3.3.3	Land use.....	120
3.4	Water supply and demand characteristics of the Upper-Berg River.....	122
3.4.1	The Theewaterskloof Dam	122
3.4.2	Urban water supply.....	123
3.4.3	Urban water demand.....	126
3.4.4	Agricultural water supply	130
3.4.5	Agricultural water demand	132
3.4.6	Ecological Reserve	134
3.4.7	The water balance for water released from the Theewaterskloof Dam	135
3.5	Quality of the Berg River water	136
3.6	The sampling process.....	137
3.7	Survey results	139
3.7.1	Responses of farmers to the survey	140
3.7.2	Characteristics of the irrigation regions.....	141
3.8	Typical farms.....	147
3.8.1	Typical farms in the riparian regions.....	148
3.8.1.1	The Berg1 region	148
3.8.1.2	The Berg2 region	150
3.8.1.3	The Berg3 region	152
3.8.2	Typical farms on irrigation board pump schemes	155
3.8.2.1	The Suid-Agter-Paarl (SAP) region.....	156
3.8.2.2	The Noord-Agter-Paarl (NAP) region	157
3.8.2.3	The Perdeberg (PB) region	158
3.8.2.4	The Riebeek-Kasteel (RK) region	158
3.9	Crop enterprise budgets.....	160
3.9.1	Long-term crop budgets.....	161

3.9.2	Short-term crop budgets	163
3.9.3	Labour requirements	164
3.9.4	Irrigation requirements of crops in the Upper-Berg River	165
3.9.5	Supplemental and deficit irrigation	166
3.10	Dimensions of the Berg River problem to be modeled	167
CHAPTER 4 : MATHEMATICAL SPECIFICATION OF THE MODEL.....		169
4.1	Introduction.....	169
4.2	Model structure.....	169
4.3	Basic algebraic terminology.....	171
4.3.1	Sets.....	171
4.3.2	Data.....	172
4.3.3	Variables.....	172
4.3.4	Equations	172
4.4	Set structure	173
4.5	Parameters.....	178
4.6	Variables.....	180
4.6.1	Variables included in the objective function	181
4.6.2	Agricultural production variables	181
4.6.3	Water trade and water use variables	182
4.7	Objective function.....	184
4.8	Equations.....	185
4.8.1	Agricultural production equations	185
4.8.1.1	Land use and production equations	185
4.8.1.2	Other resource equations	187
4.8.1.3	NDI calculations	188
4.8.1.4	Calibration constraints	190
4.8.1.5	Risk equations.....	192
4.8.1.6	Water use and balancing equations.....	192
4.9	Conclusions.....	201
CHAPTER 5 : BASE ANALYSIS, CALIBRATION AND VALIDATION.....		202
5.1	Introduction.....	202
5.2	Base model description.....	203
5.2.1	Capitalisation rate	204
5.2.2	Calibration analysis	204
5.3	Model calibration to observed water demand and agricultural production levels.....	204

5.3.1	Objective function parameters.....	205
5.3.2	Land use, land values and crop combinations	206
5.3.3	Net disposable income	210
5.3.4	Employment by the agricultural sector	212
5.3.5	Agricultural water usage.....	213
5.3.6	Urban water usage	215
5.3.7	Water supply and demand balance	216
5.4	Conclusion	218
CHAPTER 6 : THE EFFECT OF TRADE ON THE ALLOCATION OF WATER....		219
6.1	Introduction.....	219
6.2	Scenarios to be tested.....	221
6.3	Efficiency of water markets	223
6.3.1	Objective function parameters.....	223
6.3.2	Irrigation area utilisation.....	224
6.3.3	Water usage	224
6.3.4	Water values	227
6.4	Results of water restriction scenarios	228
6.4.1	Objective function parameters.....	228
6.4.2	Impact of trade on water use efficiency.....	231
6.4.3	Market allocation of water.....	233
6.4.4	Changes in crop combinations through reallocation of water	237
6.4.5	Capitalised marginal value of water sources	239
6.4.6	Trade flows	240
6.5	Urban water use growth scenarios	244
6.5.1	Objective function parameters.....	244
6.5.2	Agricultural water demand	245
6.5.3	Urban water supply and demand	247
6.5.4	Capitalised marginal value of water	248
6.6	Conclusion	251
CHAPTER 7 : IMPACT OF TRANSACTION COSTS ON WATER TRADE		253
7.1	Introduction.....	253
7.2	Transaction costs scenarios.....	255
7.3	Results	257
7.3.1	Objective function parameters.....	258
7.3.2	Transaction costs and market efficiency.....	260
7.3.3	Water values	262
7.4	Conclusion	265

CHAPTER 8 : SUMMARY AND CONCLUSION	266
8.1 Introduction	266
8.2 Summary of findings	266
8.2.1 Modelling water markets	267
8.2.2 Effect of trade on water use efficiency and the allocation of water	268
8.2.3 The impact of transaction costs on water trade	269
8.3 Conclusion	270
8.4 Recommendations for further research	276
BIBLIOGRAPHY	278
