
OPERATIONAL MODEL OF THE ORANGE RIVER

TABLE OF CONTENTS

	Page
1	INTRODUCTION.....1-1
1.1	MOTIVATION FOR THE STUDY 1-1
1.2	MOTIVATION FOR THE DEVELOPMENT OF A REAL TIME HYDRAULIC MODEL..... 1-4
1.3	OBJECTIVES OF THE STUDY 1-5
1.4	TECHNOLOGICAL DEVELOPMENTS 1-6
1.5	BACKGROUND TO THE RESEARCH 1-7
1.6	LAYOUT OF THE REPORT 1-8
2	BASIC CONCEPTS OF THE DECISION SUPPORT SYSTEM.....2-1
2.1	REAL TIME HYDRAULIC MODELLING 2-4
2.2	DETERMINATION OF THE RELEASE SCHEDULE..... 2-7
2.3	SUMMARY 2-9
3	GRAPHICAL USER INTERFACE3-1
3.1	DESCRIPTION OF THE FILE STRUCTURE..... 3-2
3.1.1	The ISIS Data File (*.DAT).....3-2
3.1.2	The Remote Data File (*.RTM)3-3
3.1.3	The Policy Files (*.POL).....3-3
3.1.4	The result files (*.ZZS, *.ZZN, *.ZZL, *.ZZR, *.ZZD)3-3
3.1.5	Calibration File (*.CAL).3-4
3.1.6	The log file (*.LOG).....3-4
3.2	THE PROCESSES OF THE DECISION SUPPORT SYSTEM..... 3-4
3.2.1	Real Time Simulation.....3-6
3.2.2	Forecast simulations3-7
3.3	SCREENSHOTS OF THE GRAPHICAL USER INTERFACE 3-8
3.3.1	The real time simulation.....3-12
3.3.2	The forecast simulation.....3-16

3.3.3	<u>The Utilities</u>	3-17
3.4	<u>SUMMARY</u>	3-19
4	<u>HYDRAULIC MODELLING DEVELOPMENTS</u>	4-1
4.1	<u>THE REAL TIME UNIT</u>	4-1
4.1.1	<u>The Flow-Time Real Time Control (QTBREAL)</u>	4-2
4.1.2	<u>The Flow-Stage Real Time Control (QHREAL)</u>	4-2
4.1.3	<u>Potential Future Developments to the Real Time Control</u>	4-5
4.2	<u>ADAPTIVE TIMESTEPPING</u>	4-6
4.3	<u>SUMMARY</u>	4-7
5	<u>THE REAL TIME TELEMETRY NETWORK</u>	5-1
5.1	<u>SUMMARY</u>	5-6
6	<u>THE HYDRAULIC MODEL</u>	6-1
6.1	<u>PREPARATION OF THE HYDRAULIC MODEL</u>	6-1
6.1.1	<u>Cross sectional data</u>	6-1
6.1.2	<u>Channel roughness</u>	6-2
6.1.3	<u>Real Time Units</u>	6-2
6.1.4	<u>Summary of the physical nature of the Orange River downstream of Vanderkloof Dam</u>	6-3
6.1.5	<u>Abstractions from the river</u>	6-7
6.1.6	<u>River Losses</u>	6-7
6.1.7	<u>Calibration of the model</u>	6-8
6.2	<u>SUMMARY</u>	6-15
7	<u>ASSESSMENT OF THE DECISION SUPPORT TOOL</u>	7-1
7.1	<u>THE EFFECT OF THE REAL TIME MODEL ON THE FORECAST SIMULATIONS</u>	7-1
7.2	<u>ESTIMATE OF SAVINGS IN WATER DUE TO THE DECISION SUPPORT TOOL</u>	7-3
7.3	<u>SUMMARY</u>	7-4
8	<u>CONCLUSIONS AND RECOMMENDATIONS</u>	8-1
9	<u>REFERENCES</u>	9-1

A	<u>THEORETICAL BACKGROUND</u>	A-1
A.1	<u>REYNOLDS TRANSPORT THEOREM</u>	A-1
A.2	<u>THE ST VENANT EQUATIONS</u>	A-4
A.3	<u>SUMMARY</u>	A-9
B	<u>HYDRAULIC MODELS</u>	B-1
B.1	<u>LUMPED FLOW ROUTING</u>	B-1
	B.1.1 <u>Level Pool Routing</u>	B-1
	B.1.2 <u>The Muskingum Method</u>	B-2
	B.1.3 <u>The linear reservoir model</u>	B-2
B.2	<u>DISTRIBUTED FLOW ROUTING</u>	B-4
	B.2.1 <u>The kinematic wave model</u>	B-6
	B.2.2 <u>The Diffusion Wave model</u>	B-7
	B.2.3 <u>The dynamic flow model</u>	B-7
B.3	<u>SELECTION OF A MODEL FOR THE ORANGE RIVER</u>	B-7
	B.3.1 <u>Lumped Flow Routing Models</u>	B-8
	B.3.2 <u>Kinematic Wave Model</u>	B-9
B.4	<u>SUMMARY</u>	B-11
C	<u>SOLUTION OF THE ST VENANT'S EQUATIONS</u>	C-1
C.1	<u>FINITE DIFFERENCE SCHEMES</u>	C-1
	C.1.1 <u>Solution of finite difference schemes</u>	C-2
	C.1.2 <u>The Explicit Scheme</u>	C-3
	C.1.3 <u>The implicit scheme</u>	C-4
C.2	<u>SOLVING THE ST VENANT EQUATIONS</u>	C-6
	C.2.1 <u>Boundary Conditions</u>	C-9
	C.2.2 <u>Initial Conditions</u>	C-10
	C.2.3 <u>The Newton-Raphson Method as a solution to the St Venant's</u> <u>equations</u>	C-11
C.3	<u>SUMMARY</u>	C-16
