

TABLE OF CONTENTS

Executive summary	ii
Terms of reference	iii
Acknowledgements	iv
Table of contents	v
List of figures	x
List of tables	xi
1. Introduction	1
2. The Economics of Demand Management	3
2.1. Introduction	3
2.2. Demand management in a consumption setting	3
2.2.1. Residential use and the law of demand	3
2.2.2. Estimating municipal and residential demand curves	5
2.3. Demand management in a production setting	6
2.3.1. Marginal cost versus average cost pricing	6
2.3.1.1. The case for marginal cost pricing	7
2.3.1.2. The case for average cost pricing	9
2.3.2. Theoretical approaches to pricing irrigation water	10
2.3.2.1. Volumetric rates	11
2.3.2.2. Flat rates	13
2.3.2.3. Output-based rates	15
2.3.3. Administrative prices versus markets	16
2.3.3.1. The case for administrative prices	17
2.3.3.2. The case for water markets	18
2.3.3.3. Evidence of water markets	19
2.3.3.4. Markets and equity	21
2.3.4. Modelling irrigation	22
2.3.4.1. Plant-water relationships	22
2.3.4.2. Water versus irrigation	25
2.3.4.3. Hypothesised farmer responses	25
2.3.4.3.1. Substituting capital for water	26
2.3.4.3.2. Substituting management for water	27
2.3.4.3.3. Deficit irrigation	27
2.3.4.3.4. Adjusting area	28
2.3.4.3.5. Crop choice	28
2.3.4.3.6. Alternative water sources	29
2.3.4.4. Diverted versus consumptive use	29

2.3.5. Estimating water demand in a production setting	30
2.3.5.1. Industrial demand	30
2.3.5.2. Commercial irrigation	30
2.3.5.2.1. Optimal application models	31
2.3.5.2.2. Water value models	32
2.3.5.2.3. Policy evaluation models	37
2.3.5.3. Small-scale irrigation in traditional communities	38
2.4. Demand management and the environmental reserve	39
2.5. Previous research in the Fish-Sundays region	40
2.5.1. Description of hydrological conditions	40
2.5.2. Demand functions and water values	40
2.6. Conclusions for model specification	41
3. Water Balance: The Study in Context	43
3.1. Introduction	43
3.2. Components of the transfer scheme	43
3.3. History of irrigation development	46
3.3.1. Pre-transfer irrigation	46
3.3.2. The Orange River Project	47
3.4. Water balance for the Fish-Sundays scheme	48
3.4.1. Water sources	49
3.4.2. User categories	50
3.4.2.1. Environmental requirement	50
3.4.2.2. Irrigation requirement	53
3.4.2.3. Municipal requirement	55
3.4.2.4. Human reserve and associated stock watering	56
3.4.2.5. Systems losses and returnflows	56
3.4.2.6. Other possible consumptive requirements	57
3.4.3. Implications for demand management	57
4. Municipal Water Value	59
4.1. Introduction	59
4.2. Data constraints	59
4.3. Panel data model and results	60
4.4. Comparable price elasticities	64
4.5. Value of municipal water	64
4.6. Policy implications	64

5. Constructing an Agricultural Model	65
5.1. Introduction	65
5.2. Stylised programming model	65
5.3. Data collection	67
5.3.1. Irrigation survey	67
5.3.2. Enterprise budgets	67
5.3.3. Isolating water values	69
5.3.4. Returns to fixed factors	71
5.3.5. Irrigation data	73
5.3.6. Modelling risk	75
5.4. Modelling intensive fruit production	76
5.4.1. Trends in citrus production	76
5.4.2. Specific citrus assumptions	78
5.4.3. Typical citrus farms	79
5.4.3.1. Small mixed farms	80
5.4.3.2. Large stable citrus farms	81
5.4.3.3. Small expanding citrus farms	82
5.4.3.4. Large expanding citrus farms	82
5.4.4. Aggregating citrus results	83
5.5. Modelling extensive livestock and fodder production	83
5.5.1. Identifying typical farms	84
5.5.2. Regional differences in farm size	85
5.5.3. Specific crop and livestock assumptions	87
5.5.4. Typical fodder and livestock farms	89
5.5.4.1. Dairy farms	90
5.5.4.2. Irrigation farms	90
5.5.4.3. Stock farms	90
5.5.4.4. Farm businesses	91
5.5.5. Aggregating fodder and livestock results	91
5.6. Summary of farm models	92
6. Irrigation Water Value	93
6.1. Introduction	93
6.2. Interpreting the data	93
6.3. Production under perfect certainty	94
6.4. Using risk to simulate observed crop mix	101
6.5. Risk adjusted production	108
6.5.1. Upper Fish	108
6.5.2. Middle Fish	115
6.5.3. Lower Fish	115
6.5.4. Sundays	116

6.6. Sensitivity analyses	119
6.6.1. Standard risk aversion coefficients	119
6.6.2. Reduced lemon income	123
6.6.3. Increasing gross margin for all crops	126
6.6.4. Changing water tariffs and other overheads	126
6.6.5. Changing agricultural wages	129
6.6.6. Irrigation systems efficiency	129
6.7. The value of water to commercial irrigation	130
7. The Value of Small-scale Irrigation	133
7.1. Introduction	133
7.2. Tyefu's irrigation history	134
7.2.1. Infrastructure development	134
7.2.2. Early performance of the irrigation project	134
7.2.3. Recent performance of the irrigation project	136
7.2.4. Conditions for success	136
7.3. Efficiency analysis	138
7.3.1. Gross margin	139
7.3.2. Irrigation costs	141
7.3.3. Accounting for labour	141
7.4. Non-efficiency arguments for allocation	142
7.5. Conclusions on small-scale traditional irrigation in South Africa ...	145
8. Summary and conclusions	147
8.1. Introduction	147
8.2. Beneficial use	147
8.3. Opportunities for reallocation	148
8.3.1. Among classes of irrigators	151
8.3.2. Between regions	152
8.3.3. From irrigation to competing uses	153
8.3.4. Changing the magnitude of the inter-basin transfer	153
8.4. Further investigation	155
8.5. Conclusions	156
References	159

Appendices	171
3.1 Water balance for the Great Fish and Sundays Rivers	171
4.1 Municipal water data	172
5.1 Farmer survey: Great Fish & Sundays	173
5.2 Raw data farmer survey: Sundays	176
5.3 Raw data farmer survey: Great Fish	179
5.4 Citrus spray program	182
5.5 Enterprise budgets	183
5.6 Citrus gross income by variety 1973-1998	187
5.7 Linear programming tableaux	188
