

TABLE OF CONTENTS

EXECUTIVE SUMMARY	i
ACKNOWLEDGEMENTS.....	xi
LIST OF ACRONYMS	xiii
1 INTRODUCTION	1
1.1 Introduction.....	1
1.2 Rationale And Objectives	1
1.3 Hypotheses.....	1
1.4 Study Area	2
1.5 Research Methodology	2
1.6 Data	3
1.7 Schema of the Report.....	3
2 LITERATURE REVIEW	5
2.1 Water is a Scarce Resource.....	5
2.2 South Africa's New Water Act.....	6
2.2.1 Water Rights	6
2.2.1 Water Licenses.....	7
2.2.2 Trading Water-Use Allocations	7
2.2.3 A right to Use Water.....	8
2.2.4 Deprivation of a Right to Use Water	8
2.3 Users' Willingness-to-pay	10
2.4 Theory and Practice of Natural Resource Accounting	11
2.4.1 International Developments Regarding Natural Resource Accounting.....	13
2.4.2 Advantages of the Economic Accounting of Water Use	14
2.5 Economic Principles for Valuing Water.....	15
2.5.1 Water as a consumption good.....	15
2.5.2 Water as an input of Production.....	16
2.6 Tools Used to Determine the Value of Water.....	16
2.6.1 Market Value	16
2.6.2 Contingent Valuation.....	16
2.6.3 Mathematical Modelling Techniques	17
2.6.4 Studies using farm linear programming approaches.....	18
2.7 Conclusions.....	19
3 MODELLING AND METHODOLOGIES.....	21
3.1 Introduction.....	21
3.2 Philosophy.....	22
3.2.1 Introduction.....	22
3.2.2 Modelling Elements.....	22
3.3 The Models	27
3.3.1 Agriculture	27
3.3.2 Forestry	28

3.3.3	Municipal	29
3.3.4	Ecology	29
3.3.5	Integration and Scenario Evaluation.....	30
3.4	Conclusions.....	31
4	DESCRIPTION OF STUDY AREA	33
4.1	Demographics	33
4.2	Water Resources of the Letaba River WUA.....	34
4.3	Water Utilization.....	36
4.3.1	Irrigated Agriculture	37
4.4	Primary Water Consumption	38
4.4.1	Afforestation	39
4.4.2	Ecological requirements.....	39
4.4.3	Transfers	40
4.4.4	Other Sectors.....	40
4.5	Salient Macroeconomic Indicators in Study Area	40
4.5.1	Gross Geographic Product	40
4.5.2	Employment.....	40
4.5.3	Household Income	40
4.6	Conclusions.....	41
5	WATER BALANCE	43
5.1	Introduction.....	43
5.2	water supply modelling.....	43
5.2.1	Mean Annual Run-off (MAR)	43
5.2.2	Annual Run-off.....	44
5.2.3	Yield.....	45
5.2.4	Evaporation	45
5.2.5	Return Flows.....	46
5.2.6	Transfers-in.....	46
5.3	Water Demand Modelling.....	46
5.3.1	Water Use Classification.....	46
5.4	Water Balance in Physical Units.....	52
5.4.1	Groot Letaba Water Balance.....	53
5.4.2	Klein and Middle Letaba Water Balance	56
5.4.3	Letaba Catchment Water Balance.....	61
5.5	Future Water Use Trends	63
5.5.1	Water Use Projections.....	63
5.6	Conclusions.....	65
6	AGRICULTURAL WATER	67
6.1	Overview Of Physical Resources.....	67
6.2	Methodology for Compiling the Whole Farm Budget.....	71
6.2.1	Data Sources	72
6.2.2	Crop Budgets	73
6.2.3	Avocados.....	74
6.2.4	Bananas	74
6.2.5	Citrus.....	75
6.2.6	Mangoes	76
6.2.7	Tomatoes.....	76
6.3	A Consolidated Farm Budget.....	77
6.4	Linear Programme Formulation And Exercising.....	80

6.5	Results.....	82
6.5.1	Linear Programme	82
6.5.2	6.5.2 Calculation of Water Rent	85
6.6	Conclusions.....	86
7	FORESTRY WATER.....	89
7.1	Introduction.....	89
7.2	Overview.....	89
7.3	Production Budgets.....	89
7.4	WATER PRODUCTION FUNCTIONS	93
7.5	Demand Schedules.....	94
7.6	Water Costs.....	96
7.7	Conclusion	97
8	MUNICIPAL WATER.....	99
8.1	Introduction and Background	99
8.2	Overview.....	100
8.3	Economic Value of Municipal Water	100
8.3.1	Introduction.....	100
8.3.2	Background.....	101
8.3.3	Contingent Valuation Experiment	101
8.4	Demand Schedule	105
8.4.1	Introduction.....	105
8.4.2	Background.....	106
8.4.3	Derivation of the Demand Schedule	106
8.4.4	Elasticity of Demand.....	107
8.4.5	Results of the Survey	107
8.4.6	Aggregation of Demand Schedules	112
8.5	Costs.....	115
8.5.1	Introduction.....	115
8.5.2	Cost of Municipal Water in the Letaba Catchment Area.....	115
8.6	Comparison of Cost and Value	117
8.6.1	Introduction.....	117
8.6.2	Costs vs. Value.....	117
8.7	Conclusion	120
9	ECOLOGICAL WATER.....	123
9.1	Background and Objective.....	123
9.2	Rationale and Methodology	123
9.3	Economic Value of Ecology Water	124
9.3.1	Economic Value of Ecology Water: Inside Kruger National Park	124
9.3.2	Economic Value of Ecology Water: Outside Kruger National Park	125
9.3.3	Results.....	129
9.3.4	Assumptions and Parameters	130
9.4	Conclusion and Recommendations.....	138
10	SCENARIOS AND THE NSP MODEL	141
10.1	Introduction.....	141
10.2	The Consumer's Surplus and Net Social payoff.....	141
10.3	The Model.....	142

Tables of Content

10.4	Scenario Generation.....	145
10.5	Scenario 1: Current Consumption.....	145
10.5.1	Method.....	145
10.5.2	Interpretation of Results.....	146
10.6	Scenario 2: Current Consumption Optimised.....	147
10.6.1	Method.....	147
10.6.2	Interpretation of Results.....	148
10.7	Scenario 3: Reallocation of water from Agriculture to Municipal	149
10.7.1	Method.....	149
10.7.2	Interpretation of Results.....	150
10.8	Scenario 4: Reallocation of water from Agriculture to Forestry	150
10.8.1	Method.....	150
10.8.2	Interpretation of Results.....	151
10.9	Scenario 5: Reallocation of water from Forestry to Municipal	151
10.9.1	Method.....	151
10.9.2	Interpretation of Results.....	152
10.10	Scenario 6: Reallocation of water from Agriculture to Forestry and Municipal	153
10.10.1	Method.....	153
10.10.2	Interpretation of Results.....	154
10.11	Scenario 7: Allocation of Unused Water	154
10.11.1	Method.....	154
10.11.2	Interpretation of Results.....	155
10.12	Conclusion	156
11	CONCLUSIONS AND RECOMMENDATIONS	157
11.1	Introduction.....	157
11.2	Summary of Objectives and Results of the Study	157
11.3	Modelling Methods.....	158
11.4	Results.....	159
11.4.1	Water Balance.....	159
11.4.2	Water Values and Costs.....	160
11.4.3	Scenarios.....	161
11.5	Summary of the Conclusions.....	163
11.6	Recommendations.....	165
	REFERENCES	167
	APPENDIX 1 The net Social Profit Model.....	A1.1
	APPENDIX 2 Polokwane Contingent Value Evaluation	A2.1
	APPENDIX 3 Water Usage and Crop Budget Worksheets.....	A3.1
	APPENDIX 4 Ecology Water Worksheets.....	A4.1
	APPENDIX 5 NSP Model Tableaux.....	A5.1
	APPENDIX 6 Notes on Agricultural Workshop.....	A6.1
