EXECUTIVE SUMMARY	ii
Project background	ii
Aims and objectives	iv
Data collection and analysis	v
Data patterns	vii
Thermal trends in the Sabie River	vii
Water temperatures and fish distributions	vii
Assessment of objectives achieved	viii
Conclusions	viii
Future research requirements	x
ACKNOWLEDGEMENTS	xi
LIST OF CONTENTS	xii
LIST OF FIGURES	xv
LIST OF TABLES	xix
1 INTRODUCTION	1
1.1 Background	1
1.2 Aims and objectives	4
1.3 Structure of the report	5
2 INTRA-ANNUAL THERMAL PATTERNS IN THE MAIN RIVERS OF THE SABIE CATCHMENT	8
2.1 Introduction	8
2.1.1 Components of water temperature	8
2.1.2 Water temperature and aquatic biota	11
2.2 Methods to quantify the thermal regime of the Sabie River	12
2.2.1 Data collection	15
2.2.2 Data analysis techniques	16
2.3 Results of Sabie River temperature monitoring: Thermal variation at the catchment scale	17
2.4 Discussion and conclusions	22
3 SIMULATING MAXIMUM DAILY WATER TEMPERATURES IN THE SABIE RIVER	25
3.1 Introduction	25
3.2 Review of statistical water temperature modelling approaches	26
3.2.1 Linear regression analysis	26
3.2.2 Time series analysis	28
3.2.3 Spectral analysis	29
3.3 Methods for simulating water temperatures in the Sabie catchment	31
3.3.1 Tests for trend and stability of mean and variance	31
3.3.2 Static water temperature models	31
3.4 Results	34
3.4.1 Quality of water temperature data	34
3.4.2 Statistical approaches for simulating daily water temperatures	34
3.4.3 Synthesis	41
3.5 Discussion and conclusions	42
4 WATER TEMPERATURE AND DISTRIBUTION PATTERNS OF FISH IN THE RIVERS OF THE SABIE CATCHMENT	46
4.1 Introduction	46

4.1.1	Water temperature and river species patterns.....	46
4.1.2	Quantification of species patterns.....	47
4.2	Data collection and analysis methods.....	48
4.2.1	Diversity indices in explaining species patterns.....	50
4.2.2	Ordination techniques in explaining species patterns.....	52
4.3	Results.....	54
4.3.1	Species patterns in the Sabie River using diversity indices.....	54
4.3.2	Species patterns in the Sabie River using ordination techniques.....	58
4.4	Discussion and conclusions.....	63
4.4.1	Reliability of fish diversity data using relative abundances.....	63
4.4.2	Fish species patterns in the Sabie catchment.....	64
5	CHILOGLANIS ANOTERUS AS AN INDICATOR SPECIES OF CHANGING WATER TEMPERATURES IN THE SABIE RIVER.....	66
5.1	Introduction.....	66
5.1.1	Aims and objectives for choosing suitable indicator species for annual water temperature in the Sabie River.....	66
5.1.2	Indicator species and the niche hypervolume concept.....	68
5.2	Methods of quantifying niche dimensions of fish species in the Sabie River.....	69
5.2.1	Quantification of niche dimensions using the niche hypervolume concept.....	70
5.2.2	Quantification of niche dimensions using niche breadths and niche overlaps.....	71
5.3	Results.....	73
5.3.1	Quantification of niche dimensions using the niche hypervolume concept.....	73
5.3.2	Quantification of niche dimensions use niche breadths and niche overlaps.....	76
5.4	Discussion and conclusions.....	78
6	A TPC FOR CUMULATIVE ANNUAL WATER TEMPERATURE IN THE SABIE RIVER, AND ITS ASSESSMENT USING BIOLOGICAL INDICATORS (<i>CHILOGLANIS</i> SPP., MOCHOKIDAE).....	81
6.1	Introduction.....	81
6.1.1	Adaptive management and thresholds of probable concern (TPCs).....	82
6.1.2	Adaptive management for water temperatures in the Sabie River.....	83
6.1.2.1	The <i>Chiloglanis anoterus</i> : <i>C. paratus</i> ratio of relative abundance index.....	84
6.1.2.2	The <i>C. anoterus</i> condition factor index.....	85
6.2	Methods for evaluating Chiloglanid biological indices.....	86
6.2.1	<i>Chiloglanis</i> ratio of relative abundances index.....	88
6.2.2	<i>C. anoterus</i> condition factor index.....	89
6.3	Results.....	90
6.3.1	<i>Chiloglanis</i> ratio of relative abundances index.....	94
6.3.2	<i>C. anoterus</i> condition factor index.....	98
6.4	Discussion and conclusions.....	101
6.4.1	General considerations.....	101
6.4.2	Choice of water temperature TPC for the Sabie River.....	102
6.4.3	TPC definition.....	104
7	THE CONCEPTUAL DESIGN OF A <i>CHILOGLANIS</i> MODELLING SYSTEM AS AN ADAPTIVE MANAGEMENT TOOL FOR USE IN THE SABIE RIVER.....	108
7.1	Introduction.....	108
7.1.1	Natural resource management and modelling.....	108
7.1.2	Modelling and adaptive management.....	109
7.2	<i>The Chiloglanis modelling system.....</i>	<i>110</i>

7.2.1	Objectives and conceptual approach	110
7.2.2	Conceptual <i>Chiloglanis</i> modelling system.....	111
7.2.3	Derivation of daily maximum water temperatures: The abiotic inputs	118
7.2.4	Linking abiotic drivers to biotic response	118
7.2.4.1	Change in condition factor of <i>C. anoterus</i> with change in water temperature.....	119
7.2.4.2	Change in relative abundance of <i>Chiloglanis</i> with change in annual water temperature.....	120
8	APPLICATION OF THE <i>CHILOGLANIS</i> MODELLING SYSTEM	123
8.1	Introduction	123
8.1.1	Adaptive management and model complexity	123
8.1.2	Aims of <i>Chiloglanis</i> modelling system.....	124
8.2	Methods for assessing the "level of predictability" of water temperature data, and application of the <i>Chiloglanis</i> modelling system under different environmental scenarios	124
8.2.1	Colwell's indices of predictability.....	124
8.2.2	Application of <i>Chiloglanis</i> modelling system	126
8.3	Results.....	127
8.3.1	Predictability of water temperatures within the Sabie catchment	127
8.3.2	Biotic output from <i>Chiloglanis</i> modelling system.....	129
8.4	Discussion and conclusions.....	137
8.4.1	Quality of data inputs.....	137
8.4.2	Validation and verification of the <i>Chiloglanis</i> modelling system	138
8.4.3	Model output and implications for management	139
9	DISCUSSION AND CONCLUSIONS	141
9.1	Synthesis.....	141
9.1.1	Water temperatures in the Sabie River	141
9.1.2	Fish as indicators of thermal change in the Sabie River.....	142
9.1.3	Assessment of original report objectives.....	142
9.2	Adaptive management implications for rivers, and management lessons learned from the rivers of the Sabie catchment	143
9.3	Adaptive management in South African rivers: Future research requirements	146
