

CONTENTS

Executive Summary	i
Acknowledgements	v
List of Tables	vii
List of Figures	viii
List of Reaction Schemes	x
List of Symbols and Abbreviations	xiii

CONTENTS

1. Introduction: Ultimate goal of study	1
2. Literature Survey	2
3.1 The synthesis of crown ethers	9
3.2 The pH dependence of sodium extraction by benzo-15-crown-5 into chloroform	10
4. Aza derivatives of benzo-15-crown-5	11
5. The synthesis of functionalised benzo-15-crown-5 macrocyclic ethers	12
6. Polymerisation of low molecular mass hydroxy-terminated polybutadiene and epichlorohydrin	17
7. Refunctionalisation of polyepichlorohydrin, PECH, 68	19
8. Anchoring of crown ethers on water-soluble polyaspartates or epichlorohydrin derivatives	21
9. Anchoring of the benzo-15-crown-5 derivatives onto a solid insoluble polymeric support	25
10. Removal of the Na ⁺ cation from the crown ether-containing devices	39
11. Conclusions	41
12. Recommendations	42
13. Products emanating from research	42
14. References	44

List of Tables

Table 1. Selected metal cation diameters	4
Table 2. The cavity diameter for selected macrocyclic ring sizes	4
Table 3. Conditions that was utilised to convert 68 to 71	20
Table 4. Effectiveness of sodium cation scavenging devices of this study in the removal of Na^+ from 10 cm^3 of a solution containing the indicated amount of Na^+ cations. Active surface area of devices = 0.00125 m^2	38
Table 5. Na^+ released from the indicated sodium cation scavenging devices at $70 \text{ }^\circ\text{C}$ in 1 mol/dm^3 HCl solution	40
