

TABLE OF CONTENTS

1. Introduction.....	1
2. Literature Review of accumulated experience and the outlook for technology development.....	2
2.1 Introduction.....	2
2.2 Biosorbents.....	3
2.3 Achievements over the past decade.....	7
2.4 Mechanism of Adsorption.....	10
2.5 Use of the Marine Alga and Peat Moss as Biosorbents.....	14
2.5.1 Algae as Metal Biosorbents.....	14
2.5.2 Peat Moss as a Low cost Biosorbent.....	16
2.5.3 Low-Cost Adsorbents in Continuous Processes.....	18
2.6 The Future.....	21
2.7 Conclusion.....	23
3. Experimental Work.....	24
3.1 Materials.....	24
3.2 Preparation of the Materials.....	24
3.2.1 Sawdust.....	24
3.2.2 Tobacco Dust.....	24
3.2.3 Peat Moss.....	25
3.2.4 Seaweed.....	25
3.3 Methodology.....	26
3.3.1 Kinetics Tests.....	26
3.3.2 Equilibrium Tests.....	26
3.3.3 Desorption Tests.....	27
3.3.4 Column Tests.....	27
3.4 Characterization of the Biomaterials.....	28
3.4.1 Lignin Tests.....	29
3.4.2 Scanning Electron Microscope Photographs.....	30
3.4.3 Chemical Analysis.....	31
4. Results And Discussions.....	32
4.1 Characterisation of Biomaterials Based on Lignin Content.....	32
4.2 Kinetics Tests.....	33
4.3 Equilibrium Tests.....	38
4.4 Desorption Tests.....	43
4.5: Discussion of Results.....	44
4.6 Column Tests.....	46
5. Economic Consideration of Biosorption.....	49
6. Capacity Building.....	50
7. Technology Transfer.....	50
Appendix 1: Physicochemical Analysis of Biomaterial.....	51
References.....	52

LIST OF TABLES AND FIGURES

Table 2.1 - Examples of natural (crude or chemically modified) materials of animal or vegetal origins tested for heavy metal removal	4
Table 2.2: Typical Characteristics of Adsorption Processes:	11
Figure 3.1:Batch adsorption tests taking place in glass bottles on a roller system	26
Figure 3.2: Column setup for adsorption and regeneration experiments with seaweed	28
Figure 3.3: Microstructure of the biomaterials	31
Table 4.1: Lignin Content of Biomaterials	33
Figure 4.1: Influence of pH (two different initial values) on the removal of heavy metal solution consisting of 2.4 mg/L of each of Cd, Cu, Ni, Pb and Zn from Tobacco Dust (1g/L)	34
Figure 4.2: Kinetics of heavy metal adsorption on tobacco dust	34
Figure 4.3 Kinetics of heavy metal adsorption with peat moss	35
Figure 4.4: Variation of pH during adsorption of heavy metals with sawdust	36
Figure 4.5: Kinetics of heavy metal adsorption with sawdust	37
Figure 4.6: Kinetics of heavy metal adsorption on seaweed particles of different sizes	38
Figure 4.7: Relationship between load and equilibrium concentrations of single heavy metal ions in solution with tobacco dust	39
Figure 4.8: Relationship between initial loading and equilibrium concentration of multiple heavy metals in solution with tobacco dust	39
Figure 4.9: Influence of pH on the removal of heavy metals from peat moss	40
Figure 4.10: Relationship between loading and equilibrium concentration for peat moss	41
Figure 4.11: Influence of pH on the loading of heavy metals on seaweed	42
Figure 4.12: Sorption isotherms of Pb on seaweed	42
Figure 4.13 Desorption equilibria of heavy metals on tobacco dust ...	43
Figure 4.14: Sorption Isotherms of seaweed in the batch column	47
Figure 4.15: Variation of pH with time during the adsorption of Cu and Pb	47
Figure 4.16: Desorption Pb and Cr from seaweed in a column	48
