

TABLE OF CONTENTS

EXECUTIVE SUMMARY	i
ACKNOWLEDGEMENTS	x
LIST OF TABLES	xiv
LIST OF FIGURES	xv
1 Introduction	1
2 Review of Flood and Regional Flood Hydrology in South Africa	4
2.1 Flood Estimation in South Africa	4
2.1.1 Deterministic methods	4
2.1.2 Statistical methods	5
2.1.3 Empirical method and pseudo-statistical methods	7
2.2 Regional Flood Estimation	8
2.3 Approach adopted for the study	11
3 Regional Flood Study CMA 15 (Drainage Region K8, K9, L, M, N, P and Q)	13
3.1 Introduction	13
3.2 Data Acquisition – Flood Peak Data	13
3.2.1 Systematic data	13
3.2.2 Historic data	16
3.2.3 Palaeoflood data	21
3.2.4 Compilation of Data Sets for Analysis	44
3.3 Data Acquisition – Catchment Characteristics	49
3.3.1 Catchment area	51
3.3.2 Mean catchment slope	53
3.3.3 River slope and main channel length	54
3.3.4 Mean Annual Precipitation-MAP	55
3.3.5 Vegetation	58
3.3.6 Soil types	59
3.3.7 Geology	60
3.3.8 Catchment Shape Parameters	61
3.3.9 Other Variables and Factors	61
3.4 Development of Index Flood (Q_i)	62
3.4.1 Selection of Q_i base	62
3.4.3 Regionalisation for Q_i estimation	70
3.4.4 Estimating Q_i using CAPA and New CAPA (NCAPA)	74
3.5 Development of Flood Peak Growth Curves	82
3.5.1 Regional flood peak growth curve development using systematic data sets	84

3.5.2	Regional flood peak growth curve development using systematic/historic data sets	87
3.5.3	Regional flood peak growth curve development using systematic/palaeoflood data sets	90
3.5.4	Splicing of Systematic, Historical and Palaeoflood Flood Peak GC's	93
3.6	Summary of NCAPA Methodology - CMA15	97
4	Comparisons with Other Methods	98
4.1	Beervlei Dam-Region 6	99
4.2	Elands Drift Dam, Great Fish River-Region 7	101
4.3	Darlington Dam, Sunday River-Region 7	102
4.4	Laing Dam, Buffalo River-Region 8	104
4.5	Comparisons with Observed Data	105
4.6	Concluding Remarks	111
5	Impact of Method on Design, Flood Risk and Flood Damage Estimation	112
5.1	Chatty River Flood Damage Estimates	112
5.2	Impact on Dam spillways and Bridge Design	115
6	Conclusion and Recommendations	117
6.1	Flow Data	117
6.1.1	Systematic data	117
6.1.2	Historical data	117
6.1.3	Palaeoflood data	117
6.1.4	Recommendations regarding Flow Data	118
6.2	Catchment Characteristics	118
6.2.1	Data Sources	118
6.2.2	Impact of the Various Data Sources on Estimated Catchment Characteristics	118
6.2.3	Relevance of Catchment Parameters	119
6.3	Development of Index Flood	119
6.3.1	Development of Index Flood	119
6.4	Development of the flood peak growth curves	119
6.4.1	Development of flood peak growth curves	119
6.5	Comparisons with other methods	120
6.6	Impact of method on design, flood risk and flood damage estimation	120
6.7	Pilot project conclusion	120
6.8	Recommendations	120
7	Future Studies	121
	References	122
	Appendices	128

APPENDICES

- Appendix A : List of all flow gauging stations for study area.
- Appendix B : Assembled AMF data series including historical and palaeoflood data
- Appendix C : Catchment characteristics for sites selected.
- Appendix C1 : Topographical characteristics
- Appendix C2 : Vegetation types
- Appendix C3 : Soil Types
- Appendix C4 : Base geology
- Appendix D : Statistical properties of data series.
- Appendix E : Log-Pearson derived flood growth curves.
- Appendix F : Flood record of the Gourits River-3000BP to present. Paper presented at the 7th South African Hydrological Symposium in Port Elizabeth. 23 to 27 September 2003.
- Appendix G : Determining of the economic viability of newly derived flood level information. Assessment of flood damages using the methodology proposed. Report by the Free State University.
