

## TABLE OF CONTENTS

1	INTRODUCTION	1
2	DATA BASE	4
3	CRITERIA FOR EVALUATING THE CONSEQUENCES OF EUTROPHICATION CONTROL MEASURES	7
3.1	Appropriate quality variables	7
3.2	Perceptible differences in quality variables of concern	10
4	EUTROPHICATION MODELLING APPROACH	13
4.1	Introduction	13
4.2	Eutrophication control measures	13
4.2.1	No phosphate reduction measures applied	15
4.2.2	Effluents complying with set phosphorus standards	15
4.2.3	Extremes in runoff conditions	15
4.2.4	Detergent phosphate restriction	17
4.2.5	Nitrogen limitation	17
4.2.6	Total dissolved solids	18
4.3	Components of the OECD modelling approach	18
4.3.1	Hydraulic loads	18
4.3.2	Nutrient loads	18
4.3.3	Nutrient concentrations	24
4.3.4	Eutrophication related water quality	32
4.3.5	Implementation	35

5	PREDICTED TROPHIC RESPONSES	37
5.1	Results	37
5.1.1	No eutrophication control	37
5.1.2	Phosphate standards	41
5.1.3	Detergent phosphate control	47
5.1.4	Nitrogen limitation	49
5.1.5	Effect of runoff	49
5.1.6	Dissolved solids	55
5.2	Discussion	57
5.2.1	The impact of the phosphate standard	57
5.2.2	A uniform standard for sensitive catchments	58
5.2.3	Detergent phosphate ban versus treatment of effluents	58
5.2.4	Cross sectional versus time series models	59
5.2.5	Application of the results	60
6	RESEARCH AND MONITORING REQUIREMENTS	62
6.1	Research requirements	62
6.1.1	Appropriate water quality variable	62
6.1.2	Uncertainty analysis	62
6.1.3	OECD modelling approach	62
6.2	Monitoring	65
7	SUMMARY	66
8	REFERENCES	67
