

FINAL REPORT TO THE
WATER RESEARCH COMMISSION
ON A THREE YEAR CONTRACT ON
DEVELOPMENT AND FULL SCALE EVALUATION OF
PREVENTATIVE AND REMEDIAL METHODS FOR
CONTROL OF ACTIVATED SLUDGE BULKING
(June 1985 to May 1988)

TABLE OF CONTENTS

SYNOPSIS	(ii)
TABLE OF CONTENTS	(v)
ACKNOWLEDGEMENTS	(viii)
PAPERS, REPORTS AND OTHER CONTRIBUTIONS PUBLISHED DURING CONTRACT PERIOD (June 1985 to May 1988)	(x)
CHAPTER 1 : INTRODUCTION	1. 1
1.1 BACKGROUND	1. 1
1.2 RESEARCH OBJECTIVES	1. 2
1.3 LAYOUT OF REPORT	1. 2
CHAPTER 2 : BULKING IN NUTRIENT REMOVAL PLANTS IN SOUTH AFRICA	2. 1
2.1 SURVEY OF FILAMENTOUS ORGANISMS	2. 1
2.2 EFFECT OF FILAMENTOUS ORGANISMS ON SLUDGE SETTLEABILITY	2. 3
CHAPTER 3 : NON-SPECIFIC BULKING CONTROL BY CHLORINATION	3. 1
3.1 INTRODUCTION	3. 1
3.2 EXPERIMENTAL STUDY	3. 1
3.2.1 Diluted Sludge Volume Index (DSVI) reduction	3. 2
3.2.2 COD, P and N removal	3. 2
3.2.3 Filament susceptibility	3. 5
3.3 DISCUSSION	3. 5
3.4 CONCLUSIONS	3. 5

CHAPTER 4 :	SPECIFIC BULKING CONTROL REVIEW OF LITERATURE	4. 1
CHAPTER 5 :	EVALUATION OF SPECIFIC BULKING CONTROL PROCEDURES IN AEROBIC LONG SLUDGE AGE SYSTEMS	5. 1
5.1	INTRODUCTION	5. 1
5.2	INTERMITTENTLY FED FILL AND DRAW CONDITIONS	5. 1
5.2.1	System set-up	5. 1
5.2.2	Results	5. 3
	Selector effect	5. 3
	Sludge settleability	5. 6
5.2.3	Conclusions	5. 6
5.3.	AEROBIC SELECTOR REACTORS	5. 6
5.3.1	System set-up	5. 6
5.3.2	Results	5. 6
	Selector effect	5. 6
	Sludge settleability	5.10
5.4.	CAUSES FOR THE GROWTH OF <i>Sphaerotilus natans</i>	5.13
5.4.1	Experimental investigation	5.14
5.4.2	Discussion and Conclusions	5.15
CHAPTER 6 :	EVALUATION OF SPECIFIC BULKING CONTROL PROCEDURES IN ANOXIC/AEROBIC LONG SLUDGE AGE SYSTEMS	6. 1
6.1	INTRODUCTION	6. 1
6.2	EXPERIMENTAL INVESTIGATION	6. 1
6.2.1	System set-up	6. 1
6.2.2	Results	6. 2
	Selector effect	6. 2
	Sludge settleability	6.10
6.3	CONCLUSIONS	6.10
CHAPTER 7 :	CONDITIONS FOR DEVELOPING LOW F/M FILAMENT BULKING SLUDGES	7. 1
7.1	INTRODUCTION	7. 1
7.2	PRELIMINARY CONSIDERATIONS	7. 1
7.3.	ANAEROBIC/ANOXIC/AEROBIC SYSTEMS	7. 2
7.3.1	System set-up	7. 2
7.3.2	Results	7. 3
7.3.3	Conclusions	7. 6
7.4	ANOXIC/AEROBIC SYSTEMS	7. 6
7.4.1	System set-up	7. 6
7.4.2	Results	7. 7
7.4.3	Conclusions	7.19

CHAPTER 8 :	AEROBIC SELECTORS IN ANOXIC/AEROBIC SYSTEMS	8. 1
8.1.	INTRODUCTION	8. 1
8.2.	EXPERIMENTAL INVESTIGATION	8. 1
	8.2.1 System set-up	8. 1
	8.2.2 Results	8. 5
	Selector effect	8. 5
	Sludge settleability	8.12
8.3	CONCLUSIONS	8.13
CHAPTER 9 :	CONCLUSIONS AND RECOMMENDATIONS	9. 1
9.1	SCOPE OF RESEARCH	9. 1
9.2	SURVEY OF FILAMENTOUS BULKING	9. 1
9.3	CHLORINATION BULKING CONTROL IN A NUTRIENT REMOVAL SYSTEM	9. 1
9.4	SPECIFIC BULKING CONTROL	9. 1
	9.4.1 Stimulation of selector effect	9. 2
	9.4.2 Purely aerobic conditions appear to ameliorate bulking by low F/M filaments	9. 2
	9.4.3 Bulking caused by <i>Sphaerotilus natans</i>	9. 3
	9.4.4 <i>S.natans</i> bulking apparently caused by seeding	9. 3
	9.4.5 Selector effect controls <i>S.natans</i> and <i>Thiothrix</i>	9. 3
	9.4.6 Low F/M filaments proliferated in nutrient removal system but not <i>S.natans</i> and <i>Thiothrix</i>	9. 3
	9.4.7 Anaerobic reactors appear to ameliorate or totally suppress <i>S.natans</i> (and <i>Thiothrix</i>) bulking	9. 4
	9.4.8 Selectors as a means of ameliorating bulking by low F/M filaments falls into question	9. 4
	9.4.9 Un-aerated/aerated conditions promote bulking by low F/M filaments and confirmation that purely aerobic conditions ameliorate this	9. 5
	9.4.10 Low F/M filaments proliferate in intermittent aeration systems	9. 6
	9.4.11 Evaluate aerobic selectors for controlling low F/M filaments	
	9.4.12 Low F/M filaments appear more sensitive to alternating un-aerated/aerated conditions than to the selector effect	9. 7
	9.4.13 Consistency of behaviour of anaerobic reactors and aerobic selectors	9. 7
9.5	RECOMMENDATIONS FOR FURTHER RESEARCH	9. 7
