

TABLE OF CONTENTS

	Page
List of Tables	iii
List of Plates	iv
List of Figures	v
Executive Summary	vii
Acknowledgements	xiii
Terminology	xv
CHAPTER 1 INTRODUCTION	
1.1 Introduction	1
1.2 Problem Statement	2
1.3 Study objective	3
CHAPTER 2 DESCRIPTION OF KHAYELITSHA CATCHMENT	
2.1 Location	4
2.2 Topography	4
2.3 Climate	4
2.4 Geology	5
2.5 Geohydrology	6
2.6 Urban development	7
2.7 Stormwater system	9
2.8 Sewerage system	10
CHAPTER 3 STORMWATER QUALITY	
3.1 The runoff cycle	11
3.2 Stormwater quality in general	12
3.3 Pollution sources	14
3.4 Third World type urban catchments	16
CHAPTER 4 METHODOLOGY	
4.1 Research framework	17
4.2 Study approach	17
4.3 Network design	18
4.4 Sample collection	21
4.5 Laboratory analysis	22
4.6 Data handling	23
4.7 Data analysis	24
4.8 Information utilization	24

CHAPTER 5	KHAYELITSHA STORMWATER QUALITY	
5.1	The initial survey	25
5.2	The main survey	29
5.2.1	Undeveloped sub-catchments	29
5.2.2	Controlled squatting sub-catchments	29
5.2.3	Serviced site sub-catchments	31
5.2.4	Core housing sub-catchments	34
5.2.5	The groundwater - stormwater quality relationship	34
5.2.6	The effects of urbanization	37
5.3	Storm event analysis	37
5.4	Pollutant loads	41
CHAPTER 6	IMPACT OF POLLUTED RUNOFF ON RECEIVING WATER BODY	
6.1	General criteria	43
6.2	Final detention basin	45
6.3	Inner-surfzone	45
6.4	Laboratory mixing study	47
6.4.1	Dissolved nutrients	47
6.4.2	Trace metals	48
6.4.3	Microbiological indicators	49
6.5	Conclusions	49
CHAPTER 7	APPLICATION OF A RUNOFF MANAGEMENT MODEL	
7.1	Introduction	51
7.2	WITSKM model	51
7.3	Discussion	52
7.4	Conclusions	53
CHAPTER 8	COMPARISON OF RESULTS WITH OTHER URBAN STUDIES	
8.1	Introduction	54
8.2	Discussion	54
8.3	Conclusions	57
CHAPTER 9	CONCLUSIONS	58
CHAPTER 10	RECOMMENDATIONS	61
CHAPTER 11	REFERENCES	
CHAPTER 12	APPENDICES	
A	- Rainfall data	
B	- Khayelitsha stormwater quality data	
C	- Continuous salinity (EC) monitoring data	
D	- Microbiological quality of the stormwater on entering the surfzone	
E	- Discharge data	

LIST OF TABLES

	Page
1. Cape Peninsula lithostratigraphy (From Hartnady and Rogers, 1990, p4)	5
2. A summary of groundwater quality from selected boreholes (After Wessels and Greef, 1980)	7
3. Water quality variables analysed for in other urban hydrological studies	18
4. Initial routine microbiological analysis of Khayelitsha stormwater	26
5. Salinity values measured during initial routine sampling	27
6. Initial routine chemical analysis of Khayelitsha stormwater	28
7. Average stormwater quality for different landuses during dry weather conditions	30
8. Average stormwater quality for different landuses during wet weather conditions	31
9. A stormwater quality comparison in a well established serviced site sub-catchment	33
10. A stormwater - groundwater quality comparison	36
11. A stormwater quality comparison in a newly established serviced site sub-catchment	36
12. The effects of urban development on stormwater quality in two sub-catchments	38
13. Average daily pollutant loads for selected parameters for the Khayelitsha urban catchment during baseflow conditions (in kg/day)	42
14. Microbiological analysis of the stormwater runoff discharged from Khayelitsha (sample Station K8)	46
15. A comparison between Khayelitsha stormwater quality and other South African studies	56

LIST OF PLATES

1. Aerial photograph of Khayelitsha (1991)
2. Different types of urban development in the Khayelitsha catchment
3. Typical sources of pollution in the Khayelitsha catchments

LIST OF FIGURES

1. Location Plan
2. Khayelitsha structural plan
(From BKS, Project Engineers)
3. Monthly rainfall trend at DF Malan Airport
(From DF Malan Weather Office)
4. Geology of the southeastern Cape Flats
5. Geological cross-sections of the Khayelitsha catchment
(After Wessels and Greeff, 1980, p152)
6. A generalized geological log showing the three units within the aquifer and their typical geohydrological characteristics
7. Groundwater salinity contour plan
(After Wessels and Greeff, 1980, p95)
8. Urban development 1989/1990
9. Urban development 1991/1992
10. Khayelitsha stormwater drainage system
11. The runoff cycle in a natural and urbanized catchment
12. The runoff cycle in a Third world type urban catchment
13. The monitoring system based on the operational activities involved in the flow of information through a monitoring system
(After Sanders *et al.*, 1983)
14. The initial stormwater sampling sites
15. Final hydrological monitoring network
16. Laboratory setup for chemical mixing experiments
17. Typical stormwater quality in a serviced site sub-catchment during periods of unrest
18. Selected stormwater quality trends for Khayelitsha urban catchment:
June 1989 - Nov 1991

19. Stormwater salinity trends as monitored at site 7 during May and September 1991
20. Storm event analysis: Hydrological data 8 - 12 July 1991
21. Storm event analysis 10 July 1991: Hydrological and microbiological data
22. Storm event analysis 10 July 1991: Chemical analysis
23. Storm event analysis: Hydrological data 27 - 30 August 1991
24. Storm event analysis 28 August 1991: Hydrological and microbiological data
25. Storm event analysis 28 August 1991: Chemical analysis
26. Storm event analysis: Hydrological data 10 - 14 September 1990
27. Storm event analysis 11 September 1990: Hydrological and microbiological data
28. Storm event analysis 11 September 1990: Chemical analysis
29. A summary of stormwater concentration, pollutant load and discharge trends during a wet month (September 1991)
30. A summary of stormwater concentration, pollutant load and discharge trends during a dry month (April 1991)
31. Microbiological results from stormwater sampling before, in, and after the final stormwater detention basin
32. Dissolved nutrient dilution experiment results
33. Trace metal dilution experiment results
34. Variation in the rainfall pattern during a single storm as recorded at 3 sites around Khayelitsha urban catchment
35. The location of other South African urban hydrological studies used for comparative purposes
