

## ACKNOWLEDGEMENTS

The research in this report emanated from a project funded by the Water Research Commission and entitled:

"Neutralisation of sulphuric acid rich water with calcium carbonate".

The Steering Committee responsible for this project, consisted of the following persons:

Dr O O Hart	Water Research Commission (Chairman)
Mr F P Marais	Water Research Commission (Secretary)
Dr H M Saayman	Water Research Commission
Mr G Offringa	Water Research Commission
Mr C van Baalen	PPC Lime Ltd
Mr J Spice	PPC Lime Ltd
Mr J Pressly	Anglo American Research Laboratories (Pty) Ltd
Miss P du Plessis	Division of Water Technology, CSIR
Dr P F Fuls	Division of Water Technology, CSIR
Dr J P Maree	Division of Water Technology, CSIR

The financing of the project by the Water Research Commission and the contribution of the members of the Steering Committee is acknowledged gratefully.

The authors also express their sincere thanks to the following parties:

- \* SOMCHEM (Krantzkop factory), particularly Messrs. B C Booyesen, C P Vermeulen, G Pienaar, H du Plessis and N van Rooyen, where the idea of limestone neutralisation of acid water in a fluidised-bed reactor had its origin, for financial support and interest in the project.
- \* PPC Lime, particularly Messrs D Scott, H Dent, P Stuver, Dr J Rossouw, Messrs J Spice, C van Baalen, W Hodgson, P de Klerk and B Gibson, for financial support and limestone samples.
- \* Department of Water Affairs, particularly Messrs A Brown and W van der Merwe, for financial support and for the provision of acid mine water from the Witbank area.
- \* Meiring, Wates and Wagner, particularly Dr A van Niekerk, in their capacity as consultants for the Department of Water Affairs, for their interest in the project.
- \* The CSIR for its financial support and provision of the required infrastructure to carry out the project. The valuable input of the co-workers: Paulette du Plessis and John Clayton is highly appreciated.

---

## CONTENTS

	Page
<b>CHAPTER 1. BACKGROUND</b> .....	1
INTRODUCTION .....	1
OCCURRENCE OF ACID WATER .....	2
Mining industry .....	3
Edible oil .....	3
Metal finishing .....	4
Explosive .....	4
Pigment .....	4
EFFECT OF ACID WATER .....	4
LEGAL REQUIREMENTS .....	5
Current approach .....	5
Future approach .....	6
CONVENTIONAL TREATMENT WITH LIME .....	7
Conventional process .....	7
High Density Sludge Process .....	7
Lime In-Line Aeration and Neutralisation System .....	8
Limedust .....	9
<b>CHAPTER 2. LITERATURE OVERVIEW ON LIMESTONE NEUTRALISATION</b> .....	10
INTRODUCTION .....	10
CHEMICAL REACTIONS DURING NEUTRALISATION .....	10
Equilibrium reactions of the carbonic system .....	10
Precipitation of metals .....	11
Oxidation of iron(II) .....	11
Sulphate removal .....	12
KINETIC MODEL .....	13
Introduction .....	13
Dissolution-rate model .....	14
LIMESTONE PROPERTIES AND ITS SELECTION .....	19
CLASSIFICATION OF ACID WATER .....	20
LIMESTONE TREATMENT SYSTEMS .....	21
Aerated limestone powder reactor .....	21
Stationary grid reactor .....	22
Stationary aerated limestone grid reactor .....	22
Rotating drum .....	24
Limestone-Lime treatment .....	25
CONCLUSIONS .....	25
