Chapter 1.	Introduction	1
1.1	Aims	1
1.2	Previous Work	4
1.3	Structure of the Report	5
Chapter 2	The Witwatersrand	6
2.1	Introduction	6
2.2	Causes of Acid Mine Drainage	8
2.3	Conceptual Model of the Surface Situation	10
2.4	Conceptual Model of the Subsurface Situation	10
Chapter 3	East Rand	14
3.1	Introduction	14
3.1.1	Background	14
3.1.2	Method of Investigation	14
3.2	Description of the Investigation Area	16
3.2.1	Topography and Surface Hydrology	16

3.2.1.1	Description of the Main Streams	16
3.2.1.2	Description of the Topography	19
3.2.2	Climate	19
3.2.3	Land Use and Economic Potential	19
3.2.4	Geology	20
3.2.5	Groundwater	24
3.3	Mining History	26
3.3.1	Coal Mining	26
3.3.2	Gold Mining	27
3.3.3	Pumping History	33
3.3.4	Dewatering of the Reefs	35
3.4	Recovery	38
3.4.1	Source of the Water	38
3.4.1.1	Inflow Observations	38
3.4.1.2	Water Supply to the Dolomites	40
3.4.1.2.1	Potential Water bearing Characteristics of the Dolomite	40
3.4.1.2.2	Recharge Potential of the Dolomite	41
3.4.1.3	Subsurface Flow Paths	43
3.4.1.4	Recovery Level and Outflow Points	45
3.4.1.5	Conceptual Model of Recovery	47
3.4.2	Historical Recovery	50
3.4.2.1	Hydrodynamic Equations	51
3.4.2.2	Graphical Extrapolation	53
3.4.2.3	Recovery Dates	55
3.4.3	Mechanisms of recovery	58
3.4.3.1	Recovery Rate	58
3.4.3.2	Pumping Rate, Recovery Rate and Rainfall Relationships	58
3.4.4	Discharge volume	63
3.5	Water Quality	65
3.5.1	Surface Water	65
3.5.1.1	Water Chemistry	65

3.5.2	Ground Water.....	67
3.5.3	Mine Water.....	69
3.5.4	Relationships Between Waters	72
3.5.5	Predicted Water Quality.....	74
3.5.5.1	Factors Affecting Water Quality.....	74
3.5.5.2	Modelled Water Quality.....	75
3.6	Impact Assessment	77
3.6.1	Catchment Modelling.....	77
3.6.2	Geotechnical Implications	77
3.6.2.1	Seismic Activity.....	78
3.6.2.2	Reappearance of Springs.....	78
3.6.2.3	Dolomite Stability.....	79
3.6.3	Inrushes at ERPM.....	85
3.7	Management.....	86
3.7.1	Water Volume	86
3.7.2	Water Quality	87
3.7.3	Monitoring.....	89
3.8	Conclusions and Recommendations	91
3.8.1	Conclusions	91
3.8.2	Recommended Further Work	94
Chapter 4	Central Rand.....	96
4.1	Introduction	96
4.1.1	Background.....	96
4.1.2	Method of Investigation.....	96
4.2	Description of the Investigation Area.....	98
4.2.1	Topography and Surface Hydrology.....	98
4.2.2	Climate.....	100
4.2.3	Land Use and Economic Potential.....	100

4.2.4	Geology.....	101
4.2.4.1	Geological Setting and Conditions.....	101
4.2.4.2	Description of the Mined Reefs.....	104
4.2.4.2.1	Main-Bird Reefs.....	104
4.2.4.2.2	The Kimberley-Elsburg Reefs.....	105
4.2.5	Ground Water.....	106
4.3	Gold Mining.....	109
4.3.1	Introduction.....	109
4.3.2	History of Mining on the Central Rand.....	110
4.3.2.1	Mineral Exploration in the South African Republic (ZAR).....	110
4.3.2.2	Gold Exploration on the Witwatersrand.....	111
4.3.2.3	Early Mining.....	112
4.3.2.4	Present Mining.....	116
4.3.3	Pumping of Mine Water.....	118
4.3.3.1	Bailing.....	118
4.3.3.2	Volumes and Pumping Positions.....	119
4.3.3.2	Fate of The Pumped Water.....	121
4.4	Recovery.....	125
4.4.1	Mine Inflows Derived from Surface Water.....	125
4.4.1.1	Surface Water Losses Via Geological Structures.....	125
4.4.1.2	Surface Stream Flows.....	128
4.4.1.3	Observed Stream Losses.....	128
4.4.1.4	Water Flowing in the Mines.....	129
4.4.1.5	Correlation with Rainfall.....	130
4.4.2	Mine Inflows Derived from Groundwater.....	134
4.4.3	Recharge.....	136
4.4.4	Rate of Recovery.....	138
4.4.4.1	Inflow Rate.....	138
4.4.4.2	Mined out Volume.....	139
4.4.4.3	Historical Evidence.....	140
4.4.4.4	Indeterminable Factors.....	140
4.4.4.5	Results.....	142

4.4.5	Discharge Points.....	145
4.4.5.1	Mine Shaft Positions.....	145
4.4.5.2	Potential Outflow Points.....	145
4.5	Water Quality.....	149
4.5.1	Introduction.....	149
4.5.1.1	Source of Information.....	149
4.5.1.2	Pollution Index.....	150
4.5.2	Measured Surface Water Quality.....	151
4.5.2.1	Klip River.....	152
4.5.2.2	Elsburg Spruit.....	155
4.5.2.3	Natal Spruit.....	158
4.5.3	Measured Groundwater Quality.....	161
4.5.4	Measured Mine Water Quality.....	163
4.5.5	Analysis of Results.....	167
4.5.5.1	Water Classification.....	167
4.5.5.2	Surface and Recharge Relationships to Water Quality.....	169
4.5.5.3	Factors Affecting Water Quality.....	172
4.5.5.4	Predicted Water Quality.....	173
4.5.6	Water Chemistry Modelling at the Outflow Points in Boksburg.....	175
4.5.6.1	Introduction.....	175
4.5.6.2	Description of the Modelled Area.....	176
4.5.6.3	Model Methodology.....	176
4.5.6.4	Water Chemistry.....	180
4.5.6.5	Results.....	183
4.6	Impact Assessment.....	185
4.6.1	Catchment Modelling.....	185
4.6.2	Geotechnical Implications.....	186
4.7	Management.....	187
4.7.1	Mining Continues.....	187
4.7.2	Mining Stops and Flooding Commences.....	188

4.7.3	Flooding is Complete and Mine Water Decants	188
4.7.3.1	Inflow Control	188
4.7.3.2	Ground Water Utilisation	188
4.7.4	Legislation	189
4.8.	Conclusions and Recommendations	190
4.8.1.	Conclusions	190
4.8.1.1.	Water Volume.....	190
4.8.1.2.	Water Sources and Mechanisms of Inflow	190
4.8.1.3.	Recovery Rate	191
4.8.1.4.	Discharge Points.....	191
4.8.1.5.	Water Volume.....	192
4.8.1.6.	Factors Affecting Water Quality.....	192
4.8.1.7.	Water Quality.....	193
4.8.1.8.	Management	194
4.8.1.9.	Geotechnical Implications	194
4.8.2	Recommended Further Work	194
4.8.2.1.	Management Options	195
4.8.2.2.	Legislation.....	196
Chapter 5	References.....	197
Plate 1 and 2	208
Appendix 1	Scatter plots of river flow gauging	209
Appendix 2	Scatter plots of the major elements.....	210
Appendix 3	Surface Water Chemistry Bar Charts.....	211
Appendix 4	Groundwater Classification diagrams	214
Appendix 5	Groundwater Chemistry Bar Charts	218
Appendix 6	Mine Water Chemistry Bar Charts.....	221
Appendix 7	Na versus Cl plots for water samples from East Rand, Free State and Central Rand Goldfields.....	224
Appendix 8	Mine Water Classification	228
Appendix 9	Surface Water Classification.....	232
Appendix 10	Comparison between surface, ground and mine water	236
Appendix 11	Boron versus sample position for Central and East Rand samples.....	238

	List of Tables	Page Number
Table 1.1	Project Aims and Method of Investigation.....	3
Table 3.3.1	Coal Mines on the East Rand	26
Table 3.3.2	Pumping Rate to Dewater East Rand Mines.....	33
Table 3.3.3	Pumped Water Volumes.....	35
Table 3.4.1	Mine Pumping Relationships with Dolomitic Overburden.....	40
Table 3.4.2.	Volume of Dolomites.....	41
Table 3.4.3.	Water Bearing Potential.....	41
Table 3.4.4.	Recharge Potential (From rainfall only).....	42
Table 3.4.5	Potential Free Flowing Shafts	46
Table 3.4.6	Effluent Discharge To Blesbokspruit River System.....	49
Table 3.4.7	Dates When Certain Critical Levels Will be Reached.....	56
