

TABLE OF CONTENTS

	PAGE
ACKNOWLEDGEMENTS	i
EXECUTIVE SUMMARY	ii
1. INTRODUCTION AND LITERATURE STUDY	1
1.1. Introduction	1
1.2. Literature study	2
1.2.1. Maize (<i>Zea mays</i> L.)	2
1.2.2. Fodder sorghum (<i>Sorghum x Sudangrass</i>)	5
1.2.3. Pearl millet (<i>Pennisetum glaucum</i> L. R. Mr.)	7
1.2.4. Soybean (<i>Glycine max</i> L. Merr.)	8
1.2.5. Cowpeas (<i>Vigna unguiculata</i> L. Walp.)	9
1.3. Motivation and objectives	10
2. GENERAL PROCEDURE	12
2.1. Trial area, material and design	12
2.2. Fertiliser application	13
2.3. Soil water monitoring and irrigation treatments	15
2.4. Harvest and further analysis of the dry matter produced	19
2.5. Fodder quality	23
2.5.1. <i>In vitro</i> digestibility	23
2.5.2. Crude protein content	23
2.6. Statistical analysis	23

3.	RESULTS AND DISCUSSION	25
3.1.	Dry matter yield	25
3.2.	Dry matter contribution of the yield components to the above-ground plant dry matter yield	27
3.2.1.	Influence of irrigation levels on dry matter contribution of the yield components in the 1994/95 season	31
3.3.	Water use	33
3.4.	Fodder quality	41
3.4.1.	Dry matter digestibility	41
3.4.2.	Crude protein content	44
3.5.	Water use efficiency (WUE)	46
3.5.1.	Water use efficiency in terms of dry matter yield (WUE_{DM})	46
3.5.2.	Water use efficiency in term of digestible dry matter yield (WUE_{DDM})	47
3.5.3.	Water use efficiency in terms of crude protein dry matter yield (WUE_{CP})	50
4.	ECONOMIC ANALYSIS	53
4.1.	Methodology	53
4.2.	Results	54
5.	CONCLUSIONS	57
6.	REFERENCES	60
7.	APPENDIX	65
