## LIST OF TABLES

<b>Table No</b>	<b>Page</b>
1	Symptoms and immediate causes of septic tank system problems . . . . . 13
2	Parameters analysed for in the case study . . . . . 22
3	The sampling programme . . . . . 22
4	Septic tank effluent quality resulting from different activities . . . . . 23
5	Water quality at different depths immediately below a soakaway (sandy terrain) . 24
6	The impact on groundwater quality immediately downgradient of the drainage field (caravan park ablution block) . . . . . 24
7	Recommended list of constituents to be analysed for during routine groundwater sampling at septic tank disposal sites . . . . . 32

## LIST OF FIGURES

Figure No		Page
1	Schematic cross-section through a conventional septic tank soil disposal system for on-site disposal and treatment of domestic liquid waste . . . . .	3
2	A typical example of a septic tank system designed as specified by a West Coast local authority . . . . .	7
3	A typical example of a septic tank system designed as specified by a South Coast local authority . . . . .	8
4	A typical example of a septic tank system designed as specified by an Eastern Cape local authority . . . . .	9
5	Typical design criteria for a conservancy tank . . . . .	10
6	Groundwater monitoring network: Domestic septic tank system in Onrus . . .	19
7	Groundwater monitoring network: For a public amenity septic tank system (with trench soakaway) - caravan park . . . . .	20
8	Groundwater monitoring network: For a public amenity septic tank system (with trench soakaway) - public pool complex . . . . .	21
9	The different hydrogeological regions into which the coast may be divided with respect to use of septic tank systems . . . . .	30
