	EXECUTIVE SUMMARY	vii
	ACKNOWLEDGEMENTS	xii
	LIST OF TABLES	xiv
	LIST OF FIGURES	xv
	LIST OF ABBREVIATIONS AND SYMBOLS	xvii
1	INTRODUCTION	1
2	LITERATURE REVIEW	3
3	EXPERIMENTAL PROCEDURES	18
3.1	Modelling approach	18
3.2	Trials and localities	18
3.3	Trial descriptions	21
	<i>Marble Hall growth analysis (1992/93)</i>	<i>21</i>
	<i>Pretoria stress trial (1992/93)</i>	<i>21</i>
	<i>Pretoria growth analysis (1992/93)</i>	<i>21</i>
	<i>Pretoria stress trial (1994/95)</i>	<i>22</i>
	<i>Vredendal growth analysis (1994/95)</i>	<i>23</i>
	<i>Platskraal growth analysis (1994/95)</i>	<i>24</i>
	<i>Messina growth analysis (1995)</i>	<i>24</i>
3.4	Measurement techniques	25
	<i>Weather data</i>	<i>25</i>
	<i>Fractional interception of photosynthetically active radiation</i>	<i>25</i>

	<i>Leaf area</i>	26
	<i>Soil water content</i>	26
	<i>Soil water matric potential</i>	27
	<i>Irrigation</i>	27
	<i>Fresh yield, dry matter and fruit quality (brix)</i>	27
4	RESULTS AND DISCUSSION	29
4.1	Growth analyses	29
	<i>Phenological development and thermal time</i>	29
	<i>Accumulated dry matter of plant components</i>	32
	<i>Fractional interception of photosynthetically active radiation</i> <i>and leaf area index</i>	33
4.2	Water use, yield and quality	34
4.3	Storage of weather data	37
5	THE TOMATO MANAGEMENT PROGRAM (TOM-MAN)	39
5.1	Introduction	39
5.2	Functions of TOM-MAN and the sub-models TOMYIELD and TOM-ECON	39
6	DESCRIPTION OF TOMYIELD, THE GROWTH SIMULATION MODEL	42
6.1	Introduction	42
6.2	Time step	43
6.3	The crop growth and development unit of TOMYIELD	43
	<i>Calculation of thermal time</i>	45
	<i>Emergence</i>	46
	<i>Fractional interception of solar radiation</i>	46
	<i>Assimilate production</i>	50
	<i>NEWSWB assimilate production</i>	50
	<i>Assimilate production during seedling growth</i>	50

	<i>The hastening influence of water stress on fruit ripening.....</i>	53
	<i>The influence of water stress on the termination of leaf growth.....</i>	56
	<i>The hastening of maturity by water stress</i>	56
	<i>Maintenance respiration of fruit and the increased</i>	
	<i>respiration rate due to the climacterium</i>	57
	<i>Assimilate partitioning.....</i>	59
	<i>Partitioning to fruits</i>	59
	<i>Partitioning to roots</i>	60
	<i>Partitioning to vegetative dry matter</i>	60
	<i>Leaf senescence.....</i>	62
	<i>Senescence rate.....</i>	65
	<i>Storage of assimilates in the leaves.....</i>	66
	<i>Root growth.....</i>	68
	<i>Fruit growth.....</i>	68
	<i>Calculation of initial values for variables</i>	72
	<i>Daily fruit water loss and gain.....</i>	73
	<i>Daily net import of fruit dry matter.....</i>	75
	<i>Redistribution of dry matter within fruits</i>	75
	<i>Total soluble solids</i>	77
	<i>Simulation of total harvestable dry matter.....</i>	77
	<i>Simulation of fresh yield and brix (% soluble solids)</i>	77
6.4	Modification to the soil water balance routine to enable simulation	
	of drip irrigation.....	78
	<i>Separate infiltration simulation for precipitation and irrigation</i>	78
	<i>Interception of irrigation by the canopy</i>	79
	<i>Evaporation with incomplete wetting of the soil surface.....</i>	80
6.5	Input parameters and data required	82
6.6	Model evaluation	83
	<i>Thermal time.....</i>	84
	<i>Overestimation of growth at the evaluation localities.....</i>	84
	<i>Extinction coefficient</i>	85

	<i>Leaf area index</i>	87
	<i>Fractional interception of radiation</i>	87
	<i>Total dry matter</i>	87
	<i>Fresh yield and brix</i>	91
	<i>Cumulative evapotranspiration plus drainage</i>	91
7	THE SIMULATION MODEL TOM-ECON	95
7.1	Introduction	95
7.2	Model structure	96
7.3	Model description	98
	<i>Input data</i>	98
	<i>User inputs</i>	98
	<i>Calculation of gross income</i>	98
	<i>Calculation of variable production costs</i>	99
	<i>Variable running costs</i>	99
	<i>Risk costs</i>	102
	<i>Calculation of net income</i>	104
	<i>Selection of the optimal strategy</i>	105
8	APPLICATION OF TOM-MAN	106
8.1	Introduction	106
8.2	Selection of optimal irrigation schedules by producers	106
8.3	Routine scheduling	111
8.4	Optimization of the price structure by processors	111
9	PROGRAMMING IN USER FRIENDLY FORMAT	113
10	CONCLUSIONS	114
11	NEEDS FOR FUTURE RESEARCH AND DEVELOPMENT	115

12	SUMMARY	117
