

# TABLE OF CONTENTS

<b>Preface</b> .....	i
<b>Executive summary</b> .....	iii
<b>Acknowledgements</b> .....	xvii
<b>Abbreviations</b> .....	xviii
<b>1 General introduction</b> .....	<b>1</b>
1.1 The term 'wetland' as used in this document.....	1
1.2 Rationale for the study .....	1
1.3 Existing approaches to index development .....	3
1.4 Broad study approach .....	6
1.5 Description of isolated depression and valley bottom wetlands .....	7
1.6 Study objectives.....	7
<b>2 Literature review</b> .....	<b>9</b>
2.1 Introduction .....	9
2.2 Why wetland assessment?.....	10
2.3 The early days of aquatic resource assessment.....	11
2.4 Modern wetland assessment: the hierarchical framework .....	12
2.5 Functional assessment .....	13
2.6 Biological assessment.....	16
2.7 Indicator taxa for aquatic bioassessment .....	18
2.8 River bioassessment methods using aquatic macro-invertebrates .....	21
2.8.1 The multi-metric Index of Biological Integrity (IBI).....	21
2.8.2 Multivariate indices.....	23
2.8.3 Numerical biotic indices.....	24
2.9 Are macro-invertebrate river bioassessment methods applicable to wetlands? .....	25
2.10 Wetland invertebrate bioassessment: existing programmes and scientific literature .....	27
2.10.1 Macro-invertebrates .....	27
2.10.2 Micro-invertebrates .....	29
2.11 Concluding remarks .....	30
<b>3 Introduction to the field study</b> .....	<b>32</b>
3.1 Isolated depression wetlands .....	32
3.2 Valley bottom wetlands .....	34
3.3 Proxy measures for human impacts on wetlands .....	34
3.3.1 Water quality impairment.....	34
3.3.2 Landscape impacts .....	35
<b>4 Methods</b> .....	<b>37</b>
4.1 Isolated depression wetlands .....	37
4.1.1 Study sites .....	37
4.1.2 Sampling .....	38
4.1.3 Data analysis .....	42
4.2 Valley bottom wetlands .....	48
4.2.1 Study sites .....	48
4.2.2 Sampling .....	49
4.2.3 Data analysis .....	50
4.3 Seasonal pans of the Free State province.....	50
<b>5 Results</b> .....	<b>51</b>

5.1	Isolated depression wetlands .....	51
5.1.1	Human disturbance variables .....	51
5.1.2	Indicator taxa – macro-invertebrates .....	52
5.1.3	Indicator taxa – micro-crustaceans .....	59
5.1.4	Metric testing – macro-invertebrates .....	63
5.1.5	Metric testing – micro-crustaceans.....	65
5.2	Testing a numerical biotic index approach using macro-invertebrates.....	73
5.3	SASS index testing .....	74
5.4	Valley bottom wetlands .....	78
6	<b>Discussion</b> .....	80
6.1	Isolated depression wetlands .....	80
6.1.1	Human disturbance variables .....	80
6.1.2	Valley bottom wetlands .....	90
7	<b>A posteriori index testing with an independent dataset</b> .....	92
7.1	Introduction and study sites.....	92
7.2	Assessing gradients of human disturbance .....	92
7.3	Comparison of sampling protocols .....	93
7.4	Assessment of index performance .....	94
7.5	Discussion of trends.....	96
8	<b>The way forward: wetland invertebrate indices in South Africa</b> .....	98
9	<b>Conclusions and recommendations</b> .....	101
9.1	Isolated depression wetlands .....	101
9.2	Valley bottom wetlands .....	102
10	<b>References</b> .....	103
11	<b>Glossary</b> .....	121

<b>Appendix 1:</b>	Summary of attributes of aquatic invertebrates as bioassessment indicators for wetlands.....	126
<b>Appendix 2:</b>	Score sheets for calculating human disturbance scores at each site.....	128
<b>Appendix 3:</b>	Measurements of human disturbance variables and environmental information collected at each study site .....	133
<b>Appendix 4:</b>	Aquatic macro-invertebrate taxa from isolated depression wetlands in this study .....	137
<b>Appendix 5:</b>	Aquatic micro-crustacean taxa sampled from isolated depression wetlands in this study.....	140
<b>Appendix 6:</b>	Full list of macroinvertebrate attributes used for IBI testing .....	141
<b>Appendix 7:</b>	Summary of study site information for valley bottom wetlands sampled in this study .....	142
<b>Appendix 8:</b>	Abundance distributions of the potential macro-invertebrate indicator families in relation to human disturbance factors .....	143
