

TABLE OF CONTENTS

EXECUTIVE SUMMARY	iii
ACKNOWLEDGEMENTS	ix
TABLE OF CONTENTS	xi
LIST OF TABLES	xv
LIST OF FIGURES	xvi
ABBREVIATIONS AND ACCRONYMS	xvii
1. INTRODUCTION	1
1.1 Background	1
1.2 Focus and limitations	3
1.3 Key Objectives	4
1.4 Methodology	4
1.4.1 Desktop review.....	4
1.4.2 Model development and analyses	5
1.5 Strategic approach	5
1.6 Notation	6
1.6.1 General	6
1.6.2 Groundwater	7
1.6.3 Greywater and reuse	7
1.6.4 Rain water	7
1.7 Legal aspects with regards to HWS use	8
1.7.1 Legal rights to water	8
1.7.2 Water Services Act	8
1.7.3 National Water Act	8
1.7.4 The "legal rights" of a home owner to HWS	10
1.8 Report structure	11
2. GROUNDWATER	12
2.1 Overview	12
2.2 Ground breaking work (1970-1978)	13
2.3 WRC-research (1990-1996)	13
2.4 Detailed hydro-census Hermanus, Western Cape (2000)	14
2.5 Comparative study – Cape Town and Perth (2001)	14
2.6 Cape Town water restrictions of 2003/2004	15
2.6.1 Groundwater abstraction registration process (2003-2004)	15
2.6.2 Data capturing, verification and categorising	16
2.7 Groundwater yield	18
2.8 Discussion	19
3. RAINWATER	22
3.1 Background to rainwater harvesting	22
3.1.1 Origin and history	22
3.1.2 Local application.....	23
3.1.3 Water quality concerns	23
3.1.4 Potential advantages of rainwater harvesting	23
3.1.5 Typical RHS components	24
3.2 Variables that influence viability of rainwater harvesting systems.....	25
3.3 Various user regimes	25
3.4 Rainwater quality for domestic consumption purposes	26
3.5 Application of RHSs in South Africa	27
3.6 Potential and yield of rainwater harvesting in the Western Cape	29
3.6.1 General	29
3.6.2 High Density Residential Areas (HDRAs)	32

3.6.3 Low density residential areas (LDRAs)	34
3.7 Strategic assessment of rainwater harvesting	38
3.7.1 Trends and Developments	38
3.7.2 Summary	39
4. GREYWATER	41
4.1 Greywater as a HWS	41
4.2 Wastewater flow volume	41
4.3 Greywater generation rate	42
4.4 Discussion	43
5. HWS MODEL AND ANALYSIS RESULTS	45
5.1 The HWS end-use model concept	45
5.2 Available end-use models	46
5.2.1 WEAP	46
5.2.2 TOPAZ-SUCO.....	46
5.2.3 REUM.....	47
5.3 Lawn water demand as a micro-component	47
5.4 Description of the model and modelling process.....	48
5.5 Garden irrigation factor	49
5.6 Results – Theoretical saving for various scenarios	50
5.7 Theoretical garden irrigation demand	52
5.8 Results for HWS meeting 100% of garden irrigation demand.....	53
5.9 Strategic direction gained from HWS model	54
6. CASE STUDY: HERMANUS GROUNDWATER USE	55
6.1 OVERVIEW	55
6.1.1 Background and scope	55
6.1.2 Objective	55
6.2 STUDY AREA	56
6.3 METHOD OF INVESTIGATION	56
6.4 DATA VERIFICATION	57
6.4.1 Complete data set	57
6.4.2 Filtering of data	57
6.4.3 Assessing lost useful data	58
6.4.4 Matching water use to data from the hydrocensus.....	58
6.4.5 Holiday influx and atypical seasonal water use	59
6.4.6 Final (filtered) sample size	59
6.5 DATA PROCESSING AND RESULTS	59
6.5.1 Method 1	59
6.5.2 Method 2	63
6.6 DISCUSSION OF RESULTS	65
7. CONCLUSION	67
7.1 Discussion	67
7.2 Typology and trends of HWS	68
7.3 Possible impact of HWS on water demand	69
7.4 Overview of HWS yield	70
7.5 Existing knowledge versus the need for knowledge	70
7.6 Specific research needs	72
7.6.1 Groundwater abstraction	72
7.6.2 Greywater reuse.....	73
