

Table of Contents

Executive Summary	iii
List of Figures	xi
List of Tables	xiii
Acknowledgements	xiv
Capacity Building	xv
1. INTRODUCTION	1
2. A FRAMEWORK FOR UNCERTAINTY ASSESSMENTS	5
2.1 Uncertainty in hydrological models	5
2.1.1 Hydro-climate forcing data	6
2.1.2 Model structure uncertainties	11
2.1.3 Model parameter uncertainties	12
2.2 Uncertainty in water resources systems models	14
2.2.1 Model parameter uncertainties (water use)	16
2.2.2 Model parameter uncertainties (operating rules)	18
2.2.3 Uncertainty and risk in current yield modelling practice	19
2.3 Uncertainty and future management risks	21
2.4 A generic uncertainty framework for South African water resources assessments	23
2.4.1 Prior parameter distributions	23
2.4.2 Uncertainty in the climate inputs	25
2.4.3 Parameter and climate input sampling within the hydrological model	25
2.4.4 Regional constraints on hydrological response	26
3. ESTABLISHING THE FRAMEWORK	28
3.1 Prior parameter estimation	28
3.2 Revised versions of the Pitman model	30
3.3 Developing regional constraint indices	32
3.3.1 Budyko type curves for mean annual runoff volume	33
3.3.2 Slope of the annual flow duration curve for monthly stream flow volumes	36
3.3.3 Groundwater recharge	37
3.4 Examples of the parameter estimation approach	38
3.5 Examples of the use of the regional constraints	40
3.5.1 Groundwater recharge constraint	40
3.5.2 Mean annual runoff (Budyko type index) constraint	42
3.5.3 Slope of the flow duration curve constraint	47
3.6 Reducing the uncertainty in the parameter ensembles	49
3.6.1 Feedback loops from the constraints to parameter estimation	52
3.6.2 Scale effects in the parameter estimation process	54
3.6.3 Using observed data to reduce uncertainty	56
3.7 Uncertainty in observed rainfall data	57
3.8 Uncertainty related to future climates	58
4. PROPAGATING UNCERTAINTY INTO YIELD MODELLING	61
4.1 Stochastic rainfall versus stochastic stream flow sequences	65
4.2 Uncertainty and risk: the interpretation of uncertain yield curves	70
4.3 Additional issues of uncertainty in simulating present day flows or yield estimates	73
4.3.1 Uncertainty in upstream inflows related to small farm dams	73
4.3.2 Uncertainty in groundwater abstraction impacts	80
4.3.3 Uncertainty in afforestation impacts	81
4.3.4 Reservoir operating rules and uncertainty	82
5. TECHNIQUES AND TOOLS FOR QUANTIFYING UNCERTAINTY	86
5.1 Pitman model parameter estimation procedures	86
5.2 The uncertainty versions of the Pitman model	89

5.3 Post-processing the uncertainty outputs of the Pitman model	90
6. COMMUNICATION OF UNCERTAINTY TO DECISION MAKERS	96
7. CONCLUSIONS AND RECOMMENDATIONS	100
7.1 Understanding uncertainty and risk	100
7.2 Sources of uncertainty	101
7.3 Quantifying uncertainty	103
7.4 Effects of uncertainty	104
7.5 Communicating uncertainty	104
7.6 Incorporating uncertainty assessments in practice	105
7.7 Reducing uncertainty	106
7.7.1 Hydrometeorological data	106
7.7.2 Parameter estimation uncertainty	108
7.7.3 Regional hydrological signatures as uncertainty constraints	110
7.8 Final observations	110
