

TABLE OF CONTENTS

1. Introduction	1
2. Aims of the project	4
3. Methodology	5
4. Literature review	5
4.1 <i>Background perspective on freeboard in dam safety evaluation of dams</i>	5
4.2 <i>General background on driving forces/mechanisms of freeboard contributing components in the South African context</i>	7
4.2.1 General	7
4.2.2 South African main weather systems	8
4.2.3 Seismic statistics of South Africa	18
4.3 <i>Existing SANCOLD Interim Guidelines on Freeboard for Dams</i>	19
4.4 <i>Literature survey of latest developed methods and tools to quantify freeboard contributing components</i>	20
4.4.1 Flood Surge	20
4.4.2 Wind set-up	21
4.4.3 Wind generated waves on the surface of a reservoir	22
4.4.4 Wave run-up	24
4.4.5 Example of calculation procedure to determine wind related freeboard contributing components	26
4.4.6 Surges induced by barometric variations, floods and landslides	27
4.4.7 Estimation of magnitude of wave heights that can be generated in the water in a dam basin (on the upstream side of a vertical concrete dam wall face) due to horizontal movement of a dam wall due to earth quakes.....	27
4.5 <i>Conclusions</i>	30
5. Analytical methods to determine wind wave height	31
5.1 <i>Introduction</i>	31
5.1.1 Objective	31
5.1.2 Scope	31
5.2 <i>Freeboard Design Parameters</i>	31
5.2.1 Fetch and Effective Fetch	31
5.2.2 Design Wind Speed	32
5.2.3 Wind Set-Up	33
5.2.4 Wave Height and Wave Period	34
5.2.5 Wave Run-Up Height	36
5.3 <i>Conclusion</i>	38
6. Mathematical modelling of wind wave height using SWAN	40
6.1 <i>BACKGROUND</i>	40
6.2 <i>LINEAR WAVE THEORY</i>	40
6.3 <i>THE SWAN WAVE MODEL</i>	41
6.4 <i>CASE STUDY – BERG RIVER DAM (BRD)</i>	44
6.5 <i>BERG RIVER DAM SWAN SIMULATION RESULTS AND OBSERVATIONS</i>	50
6.6 <i>Voëlvelei and Bloemhof Dam case studies</i>	50
7. Unsteady freeboard component prediction for reservoir Seiches, surges, set-up using hydrodynamic modelling	56
7.1 <i>BACKGROUND</i>	56
7.2 <i>SURGE AND OSCILATION EFFECTS DUE TO FLOOD INFLOWS</i>	56
7.3 <i>LOW ATMOSPHERIC PRESSURE OSCILLATIONS</i>	58
7.4 <i>WIND SET-UP</i>	60
7.5 <i>DAM OUTFLOW ADJUSTMENT</i>	62
7.6 <i>CONCLUSIONS AND RECOMMENDATIONS</i>	63
8. Combining freeboard components	64
8.1 <i>Deterministic approach</i>	64

8.2 <i>Risk analysis approach</i>	64
8.2.1 Objectives of assessment	64
8.2.2 Outline of DEFRA-QRA procedure	65
8.2.3 DEFRA-QRA SCOPE OF APPLICATION	66
8.2.4 Risk calculation	67
8.2.5 EVALUATION OF DEFRA-QRA	70
8.2.6 CONCLUSIONS	73
8.2.7 RECOMMENDATIONS	73
8.3 <i>Application of the DEFRA QRA Guide for UK Reservoirs on a typical prototype</i>	74
8.3.1 The DEFRA-QRA guide for UK reservoirs	74
8.3.2 Summary of the DEFRA-QRA model as presented in the Guide	74
8.3.3 Hardap dam results for DEFRA-QRA	76
8.3.4 SANCOLD vs DEFRA-QRA	81
8.3.5 Conclusions	82
8.3.6 Recommendations.....	82
9. Design of riprap for wind wave erosion protection at dams	83
9.1 INTRODUCTION	83
9.2 ESTIMATION OF ARMOUR ROCK SIZE, LAYER THICKNESS, UNDERLAYER AND FILTER LAYERS	85
9.2.1 Estimation of riprap rock size	85
9.2.2 Rock grading and layer thickness of riprap layer	89
9.2.3 Underlayer and filter layer	91
9.3 CREST AND TOE CONFIGURATION OF RIPRAP PROTECTION	93
9.3.1 Crest configuration	93
9.3.2 Toe configuration	93
9.4 Survey methods to check construction accuracy and monitoring of riprap layer for maintenance purposes	94
9.4.1 Survey method to check construction accuracy:	94
9.4.2 Survey method to monitor of riprap layer for maintenance purposes:	95
9.5 SUMMARY AND CONCLUSION	96
10. Conclusions and Recommendations	97
11. REFERENCES	98
