

# Setting ourselves up to realise Impact of RDI in Water and Sanitation: *Beyond Just Indicators*

Stanley Liphadzi (PhD)

**Water Research Commission**

*Supporting sustainable development through research funding, knowledge creation and dissemination*

## Global Expenditure on R&D (UN)

- Global spending on R&D has reached a record high of almost US\$ 1.7 trillion.
- **About 10 countries account for 80% of spending.**
- As part of the Sustainable Development Goals (SDGs), countries have pledged to substantially increase public and private R&D spending as well as the number of researchers by 2030.

# Expenditure on R&D

# Perceptions about R&D

- It is only for academic purpose, and therefore it is for those who are rich
- Its results or outputs are “pies in the sky”
- Results are not implementable, so there is no value for money
- Messages from research are not consistent.

Why does the public's perception of research matter?

## In the end there is failure

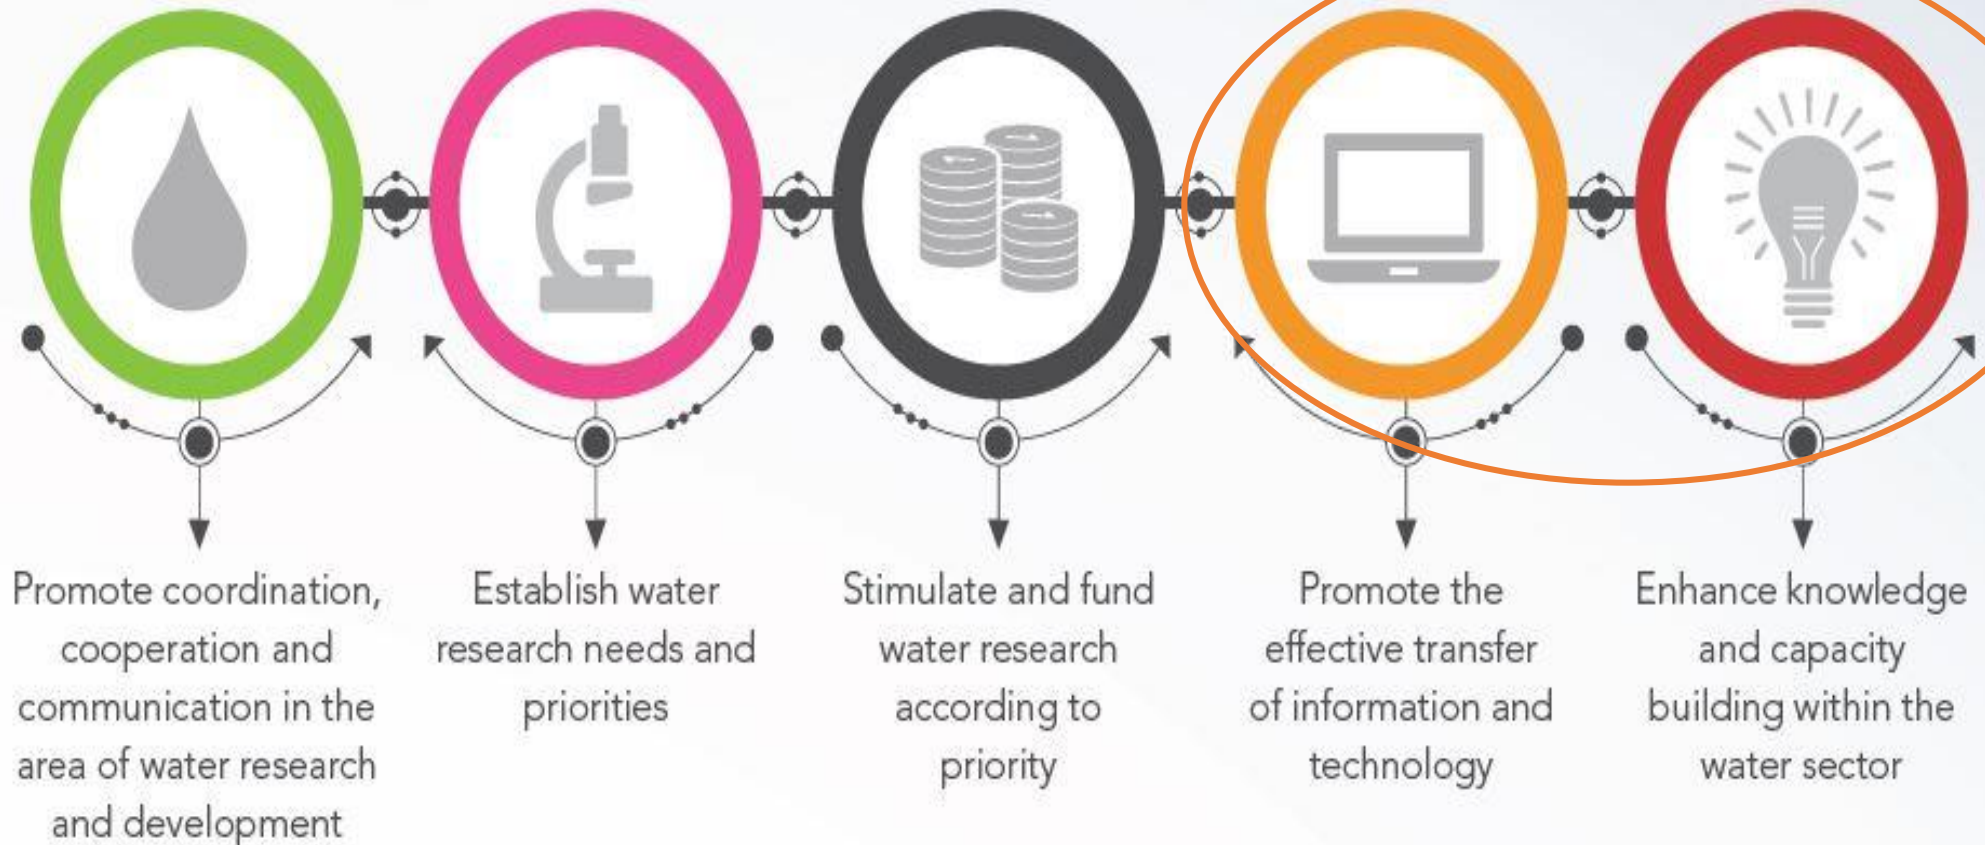

- R&D with innovative developments people are enjoying/using
- Don't see relationship between R&I and Unemployment, Poverty, and Inequality
- Failure to link Innovation with socio-economic growth.

Effort of the WRC  
to make and show  
Impact of R&I

# Actualising our mandates

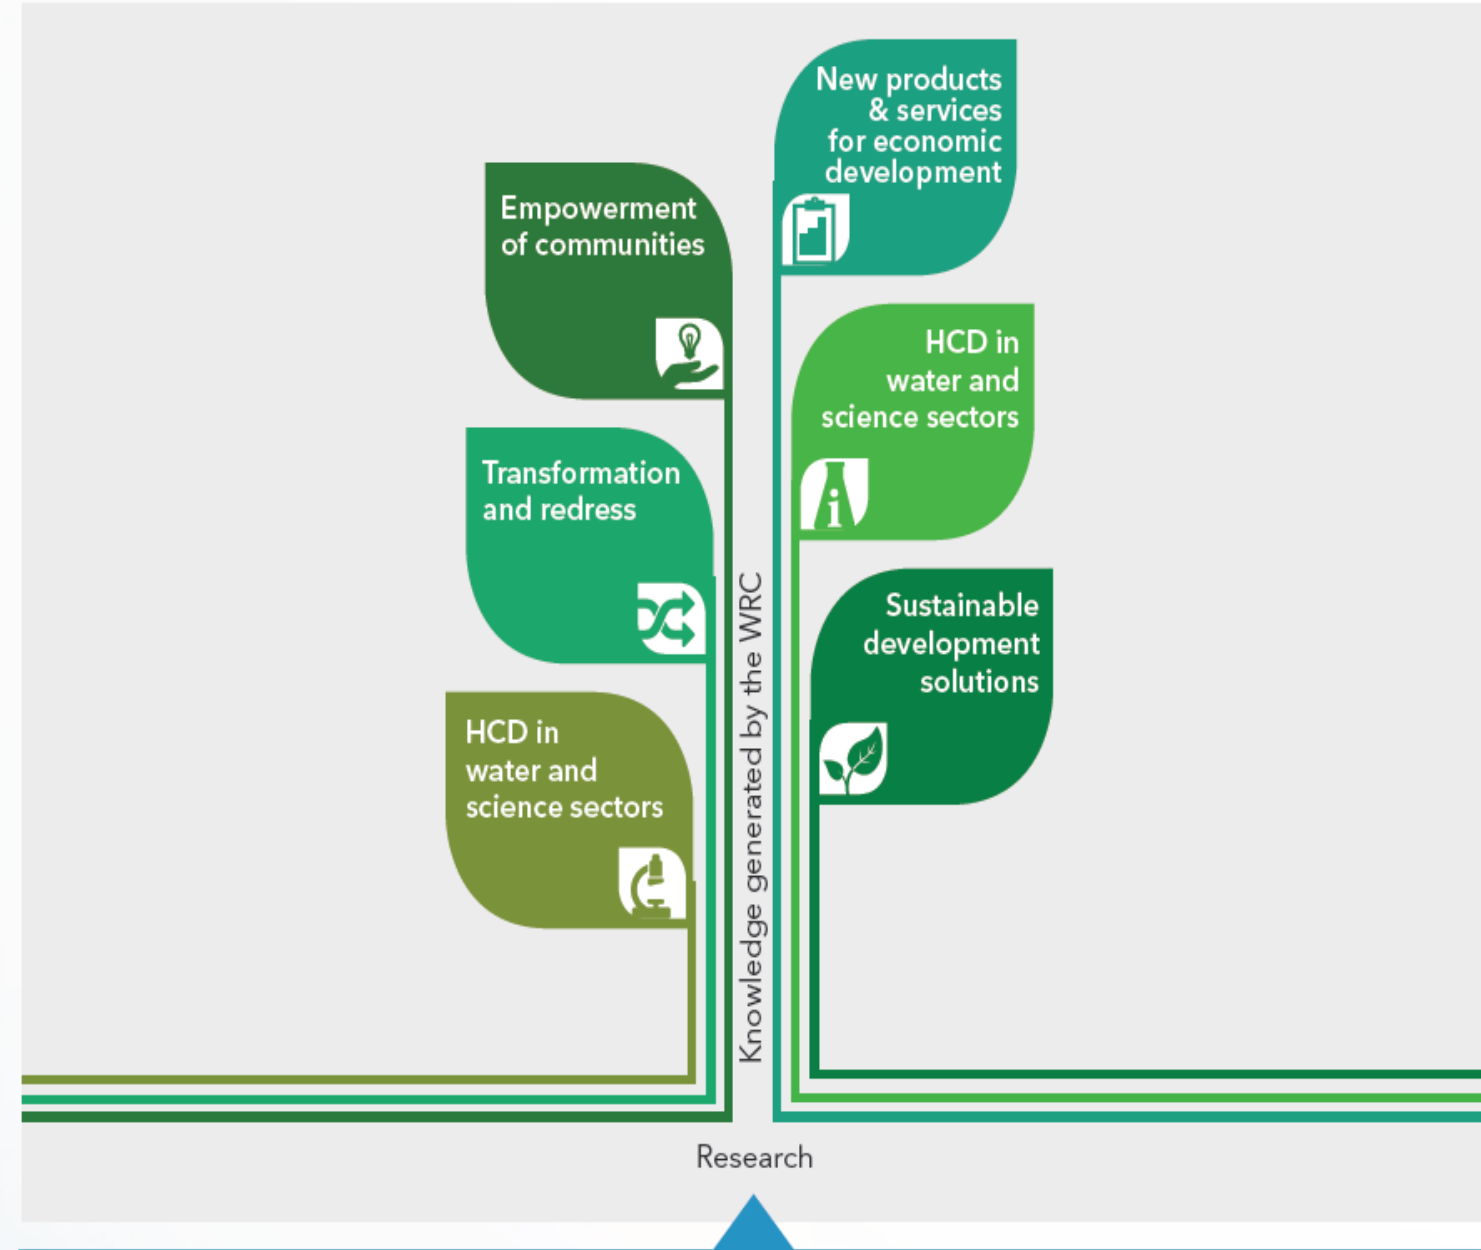

THE PRIMARY FUNCTION OF THE WRC IS TO:

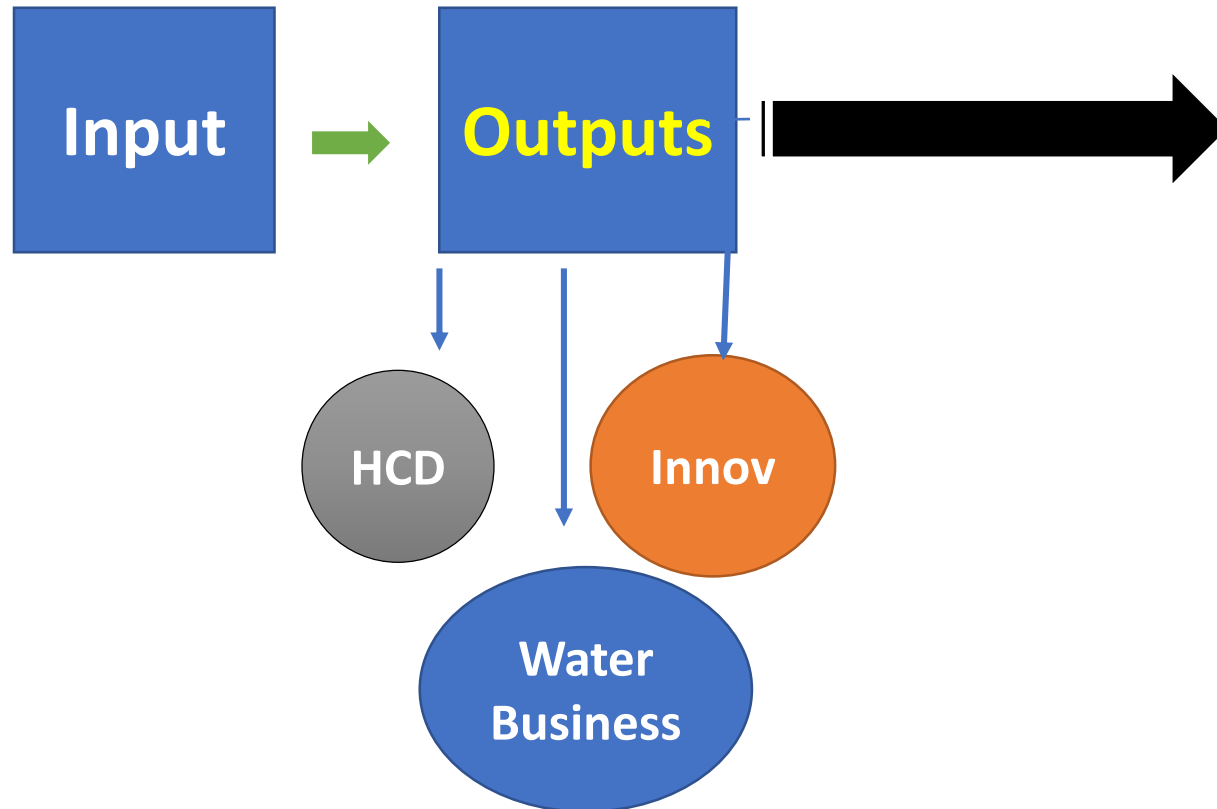

WATER  
RESEARCH  
COMMISSION

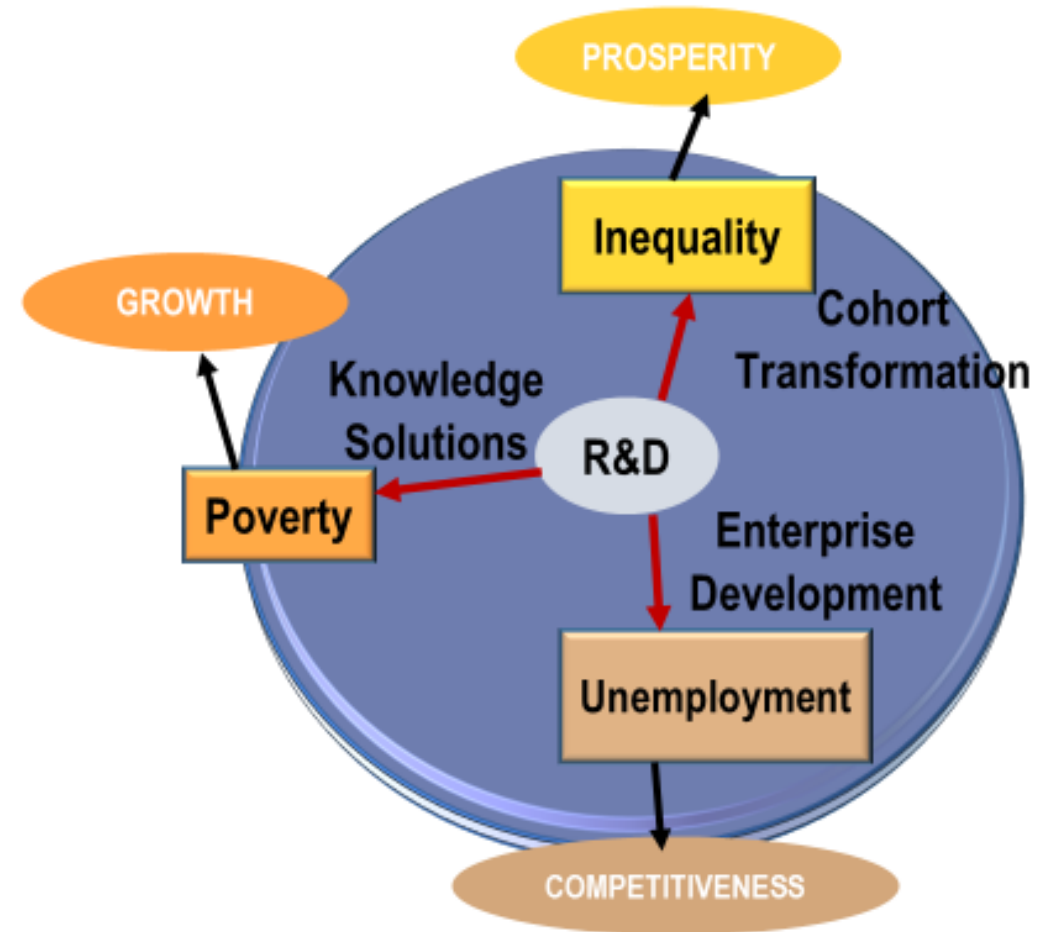

# Outcomes Orientated R&D

# The Journey towards realising Impact

## The Triple Challenge

# R&I Indicators

**Output  
Focused**

**Research  
Projects**

**Research  
Actors**

**PL**

**Students  
&  
postdocs**

**Institutions**

**Transformation**

**Outcome  
Focused**

**Policy &  
decision  
making**

**Improvements**

**Industrialisation  
(commercialisation  
& SMEs)**

# Impact must be beyond just Indicators for the investors (tax payers) to see RoI

# South Africans could be hit with huge water bills next year
